

# Midtown Las Vegas Secures C-PACE Approval for Next Phase of Mixed-Use Tower Development

LAS VEGAS, NV, UNITED STATES, March 11, 2026 /EINPresswire.com/ -- Midtown Las Vegas has received approval from the Las Vegas City Council for a Commercial Property Assessed Clean Energy (C-PACE) assessment, providing financing for its next mixed-use tower and positioning the project to generate more than 300 construction and permanent jobs.

The City Council's vote authorizes Midtown to apply a C-PACE assessment to the property and is a significant milestone that aligns the project with the City of Las Vegas' broader sustainability and energy efficiency goals. As part of the city's ongoing efforts to promote energy-efficient development and support innovative financing programs that facilitate clean energy and

efficiency investments, this municipal approval underscores Las Vegas' commitment to environmentally responsible growth and long-term community impact.

“

Securing C-PACE approval is an important step in executing a disciplined and forward-looking capital strategy”

*Anna Olin, Midtown Las Vegas*

C-PACE financing will serve as an important component of the project's overall capital strategy, helping secure long-term private capital for energy, water and resiliency improvements tied to construction of the new tower in downtown Las Vegas.

“Securing C-PACE approval is an important step in executing a disciplined and forward-looking capital strategy,” said Anna Olin of Midtown Las Vegas. “The program allows us to align private investment with the city's sustainability priorities while advancing a project that will create jobs and long-term economic impact. We look forward to sharing additional project updates in early Spring.”

Midtown previously helped introduce C-PACE to the local commercial real estate market through

The English Hotel, which was the first Commercial-PACE loan in the city of Las Vegas. The project received a \$10 million allocation — the largest C-PACE allotment in Las Vegas history at the time — and has since been referenced in development and finance circles as one of the earliest urban hospitality projects in Southern Nevada to utilize the mechanism.

At the time, C-PACE was still emerging locally. Early adoption at Midtown demonstrated how the structure could integrate into a hospitality capital stack while supporting energy efficiency, water conservation and long-term building performance improvements consistent with municipal sustainability goals.

Since those initial transactions, C-PACE has expanded in scale and market acceptance across the region. Notable projects include the dual-branded AC Hotel by Marriott Las Vegas Symphony Park and Element by Westin Las Vegas Symphony Park, underscoring the program's growing role in large-scale hospitality and mixed-use development.

For the city, C-PACE approvals advance environmental objectives without deploying public capital. The assessment remains attached to the property and transfers with ownership, providing long-term continuity and compliance.

The newly approved Midtown tower is expected to expand the district's hospitality and mixed-use offerings while contributing to continued reinvestment in downtown Las Vegas. Additional details regarding the project's design, timeline and vertical development plans are expected to be released in early spring.
