

THE.Hosting Launches Domain Registration Across 100+ Zones

International hosting provider expands its infrastructure ecosystem, enabling seamless domain and hosting management within a single platform

NETHERLANDS, March 20, 2026

/EINPresswire.com/ -- [THE.Hosting](#) has announced the launch of [domain name registration services](#), allowing clients to manage both domains and hosting infrastructure within a single platform. The new functionality eliminates the need to work with separate domain registrars and hosting providers, streamlining the process of launching online projects.

Everything in One Place

We found that project owners were either forced to manage multiple vendors or spend time coordinating between registrars and hosting providers — neither of which is efficient for modern businesses”

*Product Manager at
THE.Hosting*

Launching a digital project has traditionally involved multiple providers — one for domain registration, another for hosting, and often a third for DNS management. This fragmented approach results in multiple accounts, separate billing systems, and unnecessary coordination when connecting services.

THE.Hosting addresses this inefficiency by consolidating domain and hosting management into a single platform.

How It Works

Domain registration is fully integrated into the THE.Hosting

client area, providing a streamlined and intuitive experience:

- Domain search: check availability across 100+ domain zone
- Popular TLDs: .com, .net, .org, .io, .dev, .app, and more
- Specialized zones: industry-specific domains for niche use cases

- Instant payment: multiple payment methods available directly in the client area
- Automatic integration: domains are instantly connected to hosting services

The process is straightforward: users enter a desired domain name, instantly check availability, review alternatives if needed, and complete registration in just a few clicks.

Designed for Real-World Use Cases

The integrated approach is particularly valuable for:

- Startups launching MVPs with minimal setup time
- Web agencies managing multiple client projects from a single dashboard
- Developers deploying test environments and prototypes
- Businesses requiring fast time-to-market for new services

Global Infrastructure Integration

A key advantage of [THE.Hosting's](#) domain service is its direct integration with a global server infrastructure spanning 50+ countries. Customers can register a domain and immediately connect it to a server in their preferred region, whether in Europe, North America, or Asia-Pacific.

- All registered domains include:
- Free DNS hosting on resilient infrastructure
- A user-friendly DNS management panel
- Instant propagation of DNS changes
- 24/7 technical support
- Transparent renewal pricing with no hidden fees

About THE.Hosting

THE.Hosting is an international hosting provider specializing in high-performance VPS and dedicated server solutions. The company delivers KVM-based virtualization with guaranteed resources, 10 Gbps network connectivity, and 24/7 technical support across more than 50 global locations.

THE.Hosting focuses on transparency, reliability, and straightforward pricing — without hidden costs.
