

Cloud Destinations Inc. Recognized for Leading AI-Driven Enterprise Transformation in Global 100 – 2026 Awards

SAN RAMON, CA, UNITED STATES, March 30, 2026 /EINPresswire.com/ -- Cloud Destinations Inc. has been named Computer & Network Security Business of the Year in the Global 100 – 2026 awards, recognizing its role in helping enterprises move from fragmented systems to intelligent, decision-driven operations.

At a time when most organizations are still struggling to connect data, tools, and workflows, Cloud Destinations has taken a different approach building connected enterprise systems where AI, data, and execution operate as a single layer.

Founded in 2016, the company works with enterprises navigating complex environments where scale, security, and speed are all critical. Instead of delivering isolated solutions, Cloud Destinations acts as a single transformation partner, bringing together cloud, data, AI, cybersecurity, and application engineering into a unified model. The focus is not just modernization it is operational clarity.

Cloud Destinations builds modern data and AI platforms using technologies such as Microsoft Fabric, Azure, Databricks, and real-time data architectures. These systems are designed to do more than report on the past they enable organizations to act in real time, anticipate change, and automate decisions where it matters.

The company's work spans industries where complexity is high and outcomes are critical:

- Healthcare systems requiring interoperability, analytics, and operational coordination
- Retail organizations managing demand, inventory, and customer experience at scale
- Technology companies building and scaling SaaS platforms with embedded intelligence

A key differentiator is Conclaves.AI, the company's proprietary platform, which serves as a decision intelligence layer across enterprise environments. By connecting data, workflows, and AI models, Conclaves.AI enables organizations to move beyond dashboards toward continuous, AI-assisted decision-making.

Security remains foundational to this approach. Cloud Destinations aligns its solutions with standards such as SOC 2 Type 2, ISO 27001, and ISO 9001 ensuring that as systems become more intelligent, they also remain secure, compliant, and resilient.

"Most enterprises don't have a technology gap they have an alignment gap," said Siva Dharmaraj, CEO of Cloud Destinations. "Our focus is on bringing data, AI, and execution together so

organizations can move faster, make better decisions, and operate with confidence.”
As enterprise transformation continues to evolve, Cloud Destinations is focused on what comes next helping organizations move from digital systems to intelligent, adaptive, and increasingly autonomous operations.

About Cloud Destinations Inc.

Cloud Destinations Inc. helps enterprises design and operate connected systems across cloud, data, AI, and cybersecurity. The company focuses on building environments where information flows in real time, decisions are supported by intelligence, and operations can scale with clarity and control.
