

Silver Air Private Jets Selects Bluetail for Digital Aircraft Record Management

Cloud Platform Accelerates Aircraft Onboarding, Reduces Conformity Time, and Strengthens FAA Audit Readiness

SCOTTSDALE, AZ, UNITED STATES, March 31, 2026 /EINPresswire.com/ -- [Silver Air Private Jets](#), a leading private aircraft management company and charter operator, has adopted [Bluetail](#)'s cloud-based aircraft record management platform to digitize and centralize its maintenance records, streamline aircraft conformity processes and strengthen compliance across its fleet.

The deployment has allowed Silver Air to replace a workflow historically dependent on physical logbook records with a fully searchable digital system. The transition has reduced the time required to onboard new aircraft into revenue-generating service and has given the operator a more ready position during routine FAA audits.

“

Every extra day an aircraft sits in conformity is revenue we're not seeing. Bluetail doesn't just save time — it directly impacts our bottom line.”

John Ishaq, VP of Technical Operations & DOM, Silver Air

Silver Air's primary revenue is generated through charter flights, making the speed and accuracy of aircraft conformity — the process by which a newly acquired aircraft is verified as airworthy and compliant with FAA regulations — a direct factor in the company's financial performance. Delays in conformity translate directly into lost charter revenue for both the operator and the aircraft owner.

“Bluetail has become central to how we operate day to day,” said Ava Troiani, project manager at Silver Air. “The ability to search through an aircraft's entire record history in minutes rather than digging through binders for weeks has changed the

pace at which we work."

Silver Air first encountered the limitations of its paper-based system while onboarding aircraft previously operated overseas, including in China and Singapore. Maintenance records from those operators followed different organizational conventions and, in some cases, were written in foreign languages. The process of manually sorting and cross-referencing those records for FAA conformity submissions proved time-consuming and resource-intensive.

"When we first started pulling records on aircraft that had been maintained overseas, we quickly realized that paper was not going to scale," Troiani said. "There had to be a better way, and Bluetail turned out to be it."

Bluetail's keyword search functionality (MACH Search) allows Silver Air's team to locate specific maintenance documents, airworthiness directives and supplemental type certificates

without manual page-by-page review. The platform also includes a compliance module that the company has used to conduct a fleet-wide audit of all active airworthiness directives, service bulletins and 337 supplemental type certificates — a project that took approximately six months and fed directly into the company's quarterly Continued Analysis and Surveillance (CAS) meetings, a mandatory FAA regulatory requirement.

"Every extra day an aircraft sits in conformity is revenue we're not seeing. Bluetail doesn't just save time — it directly impacts our bottom line." — John Ishaq, Vice President of Technical Operations and Director of Maintenance, Silver Air

"Silver Air is a great example of what happens when an operator commits to doing things right," said Roberto Guerrieri, CEO and Co-Founder of Bluetail. "They didn't just adopt the technology — they built real operational discipline around it. That kind of proactive approach to compliance is exactly what the industry needs more of."

SILVER AIR
PRIVATE JETS

Silver Air Private Jets a leading private aircraft management company and charter operator.

Bluetail is the leading modern aircraft records solution.

Bluetail's platform is used by Part 135 and Part 91 operators to digitally manage aircraft maintenance records, track regulatory compliance and support conformity submissions. The company, based in Scottsdale, Ariz., serves aviation operators across the world.

###

About Silver Air Private Jets

Silver Air Private Jets, based in Santa Barbara, California, is a leading private aircraft management company and charter operator. Founded in 2008, the company manages a fleet of over 30 aircraft and offers aircraft management, charter, sales, and acquisitions with a transparent, owner-first approach. Its invitation-only Flight Club™ program simplifies private jet access with streamlined booking, transparent pricing, and personalized concierge support—offering clients greater control and flexibility than traditional jet programs. To learn more, visit silverair.com.

About Bluetail

Bluetail is the leading AI-powered aircraft records solution for business aviation, helping owners, operators, and flight departments move beyond paper by digitizing, organizing, and intelligently searching every record—back-to-birth—on any device. Powered by aviation-specific machine learning, Bluetail transforms records into actionable intelligence to ensure compliance, streamline maintenance, and protect aircraft value, all within a secure, FAA-compliant cloud.
