

Work Perfect announces strategic partnership with Google Cloud to integrate workflow, data and AI

The expansion builds on Work Perfect's existing monday.com Platinum partnership and extends its structured transformation model into agentic AI.

SYDNEY, AUSTRALIA, April 1, 2026 /EINPresswire.com/ -- Work Perfect today announced a

Organisations pulling ahead are not simply adopting more AI tools. They're integrating AI into the workflows their teams use every day, with clear governance and measurable outcomes."

Work Perfect*

strategic partnership with Google Cloud, expanding its delivery capabilities across workflow execution, enterprise data, and AI. The expansion builds on Work Perfect's existing monday.com Platinum partnership and extends its structured transformation model into governed analytics and agentic AI.

The collaboration reflects a broader shift in enterprise priorities. Organisations are moving beyond platform deployment toward integrating AI into day-to-day operations, with clearer governance, measurable outcomes, and operational impact. Work Perfect's approach is designed to support that transition.

To deliver this, the company combines three core capabilities:

- monday.com for workflow execution, structuring how work is planned, routed, and delivered
- Google Cloud for enterprise data and AI, including BigQuery, Looker, Vertex AI, and Gemini to power insight, automation, and intelligent agents
- Work Perfect's structured delivery methodology, embedding these capabilities into operating models so adoption, governance, and performance are sustained over time

Together, these capabilities enable organisations to connect workflow activity with governed data and AI-driven insight, supporting real-time decision-making and automated coordination within existing systems.

Rather than leading with technology alone, Work Perfect begins with process mapping and operating model design. This ensures AI and analytics are deployed where they create measurable value, and that adoption is embedded from program inception through rollout.

“Organisations pulling ahead are not simply adopting more AI tools,” said Sharang Bharadwaj, CEO of Work Perfect. “They are integrating AI into the workflows their teams use every day, with clear governance and measurable outcomes. Our partnership with Google Cloud allows us to connect workflow platforms with enterprise data and AI in a structured, repeatable way.”

In practice, the integrated model supports organisations to:

- Embed AI agents within live workflows to support coordination, risk detection, and automation
- Connect operational, financial, and project data into governed dashboards and reporting
- Generate executive visibility directly from workflow activity, reducing manual reporting effort
- Strengthen adoption through consulting-led change frameworks aligned to delivery outcomes

The partnership enhances Work Perfect’s ability to deliver transformation programs across enterprise and public sector environments, aligning workflow clarity, trusted data, and intelligent automation within a single operating framework.

By integrating workflow execution, enterprise data, and AI capability, Work Perfect helps organisations move from experimentation to operational deployment, turning technology investment into measurable improvements in productivity, performance, and visibility.
