

Soberlink Launches the Next Generation of Alcohol Monitoring With Soberlink 7.0 — 7th Gen Device, #1 In Proving Sobriety

HUNTINGTON BEACH, CA, UNITED STATES,

April 1, 2026 /EINPresswire.com/ --

Soberlink today announced the release of Soberlink 7.0. Designed and manufactured in the United States, Soberlink 7.0 is the most advanced, seventh-generation device, further solidifying the company's leadership position as the #1 alcohol monitoring technology.

“

What matters to judges is trust, and Soberlink's commitment to continually improving its technology gives courts even greater confidence in the data they rely on to protect families.”

Former Judge Timothy McGoughran

The launch comes amid surging demand for remote alcohol monitoring, as family law practitioners, addiction treatment providers, and workplace compliance professionals increasingly adopt and rely on real-time sobriety monitoring. With more than 15 years exclusively dedicated to alcohol monitoring, Soberlink has invested more time, capital, and resources into continuous improvement than any other company in the industry. This long-term commitment is what keeps Soberlink the trusted name in alcohol monitoring.

“When children's safety is at stake, courts cannot rely on tools that are inconsistent or easily manipulated,” said former Judge Timothy McGoughran. “During my time on the bench, I looked for monitoring solutions that were accurate, dependable, and designed with real-world courtroom use in mind. Soberlink has consistently set that standard. What matters to judges is trust, and Soberlink's commitment to continually improving its technology gives courts even greater confidence in the data they rely on to protect families.”

Dr. Aaron Robb added, “One of the biggest risks in recovery is a false sense of security. Trust has to be earned and verified, not assumed. Soberlink makes honesty possible by providing clear, reliable data that clients, clinicians, and families can all rely on. When accountability is consistent and transparent, it supports real recovery rather than just the appearance of it.”

For professionals whose decisions impact children's safety, patient outcomes, and workplace risk, the choice is clear: rely on the company that has proven its leadership year after year, generation after generation.

Seven Levels of Confidence

Soberlink 7.0 introduces three new levels while retaining the trusted features that have made Soberlink the industry standard for over 15 years:

1. Enhanced Tamper Detection – New. Unbeatable, patent-pending technology utilizes additional sensors to detect all non-human air sources and deliver faster tamper alerts.
2. More Efficient Technology – New. Fully re-engineered chamber, fuel cell, and pump offer greater consistency on all tests.
3. Refined Precision – New. New sampling technology that analyzes environmental factors before testing begins.
4. Trusted Facial Recognition. Technology verifies identity, ensuring the right person is always testing.
5. Soberlink Advanced Reporting. Court-admissible, AI-powered reports provide judges, attorneys, and treatment professionals with trustworthy evidence.
6. Upgraded Mobile Experience. An intuitive app transmits results seamlessly, anytime, anywhere.
7. Expert Support Team. Backed by more than 15 years of innovation, Soberlink’s specialists provide guidance and training to ensure successful implementation.

Soberlink's 7th Generation Device

These levels build on the company’s seven generations of innovation, which began with the original Soberlink 1 device in 2011 and culminate with the Soberlink 7.0 release.

About Soberlink

Soberlink is the premier remote alcohol monitoring system, combining cutting-edge technology with compassionate design to support accountability in recovery and family law. Since 2011, Soberlink has been the trusted choice of medical professionals, courts, and families seeking a discreet, court-admissible solution that promotes lasting change. The company’s FDA-cleared devices and secure cloud-based platform offer real-time insights and verified testing, setting the standard for reliability and trust in alcohol monitoring.
