

Aluminum Distributor Expands Precision Sawing Capabilities for Stock Products

MILWAUKEE, WI, UNITED STATES, April 1, 2026

/EINPresswire.com/ -- Howard Precision Metals has expanded its precision aluminum sawing operations to support a broader range of stock products, including cast tooling plate, wrought plate, mold plate, and aluminum extrusions in bar and shape forms. The update reflects ongoing adjustments to meet varied material specifications and dimensional requirements across industrial applications.

Focus remains on serving manufacturers and fabrication teams that require specific aluminum grades, thicknesses, and finishes for machining and tooling processes. Attention is given to those selecting between wrought, cast, and mold aluminum based on strength and cost considerations tied to end-use requirements.

Operations incorporate high-speed plate saws and extrusion saws capable of handling material thicknesses up to 10 inches and widths up to 72.5024 inches. Precision cutting tolerances and surface finish control are maintained through in-house equipment, supporting both standard stock orders and custom-sized requests

Availability of in-stock alloys such as Mic 6, ALCA 5, 6061, 7075, 2024, and 7050 supports varied machining and tooling needs. Regular updates to inventory, including smaller [aluminum plates](#) and extrusion pieces, provide options for projects requiring limited quantities without large minimum orders.

About the Company:

[Howard Precision Metals](#) is a 100% [aluminum distributor](#) established in 1928. The company supplies aluminum plate, sheet, and extruded products while providing precision sawing services for industries requiring exact material specifications and controlled tolerances.
