

# Enflux Announces Blackboard Integration to Identify At-Risk Students

SAN ANTONIO, TX, UNITED STATES, April 1, 2026 /EINPresswire.com/ -- [Enflux](#), a leading provider of comprehensive data analytics and decision-support solutions for higher education, today announced a new integration with [Blackboard](#), one of the most widely used learning management systems in academic institutions.

The integration enables institutions to bring [Blackboard data into the Enflux platform](#), transforming course and student performance data into clear, actionable insights for faculty, mentors, and academic leaders. By leveraging Blackboard's developer API, the integration securely and automatically ingests data, ensuring timely and reliable visibility into student progress.

“

This integration helps institutions identify and track students who may be at risk and turn Blackboard data into meaningful insights that faculty and mentors can use to support student success.”

*Alejandra Zertuche, CEO of Enflux*

With this release, Enflux introduces two complementary dashboards designed to support different roles across the institution:

- Blackboard Student Advising Dashboard (mentor view): provides a comprehensive view of each student's performance across all enrolled courses, including grades and assignment-level data. This enables advisors and mentors to monitor student progress holistically and identify individuals who may need additional support.
- Blackboard Student Course Performance Dashboard (faculty view): offers faculty a course-level perspective,

displaying all courses they teach, enrolled students, and their respective performance. This view helps instructors quickly identify and track at-risk and vulnerable students within their courses and take timely action.

This unified experience provides visibility into student performance at both the program-wide and course level, enabling educators to identify and track at-risk students earlier and intervene

more effectively.

“Learning management systems hold critical data about student performance, but that data is often difficult to interpret and act on,” said Alejandra Zertuche, CEO of Enflux. “This integration helps institutions identify and track students who may be at risk and turn Blackboard data into meaningful insights that faculty and mentors can use to support student success.”

The Blackboard integration is part of Enflux’s broader mission to connect and unify academic data across systems, enabling institutions to improve outcomes, strengthen curriculum oversight, and support accreditation efforts.
