

Covalent Resource Group and ExitPi Announce Strategic Partnership to Bring Embedded AI Solutions to Businesses

Delivering responsible AI that integrates seamlessly into operations and drives smarter decisions.

MT. CLEMENS, MI, UNITED STATES, April 16, 2026 /EINPresswire.com/ -- [Covalent Resource Group](#) (CRG) and [ExitPi](#) today announced a strategic partnership that will make AI-powered capabilities a natural part of how businesses operate in ways that improve performance, strengthen decision-making, and modernize operations without adding complexity.

The partnership combines CRG's agile delivery expertise and solution architecture with ExitPi's proprietary AI platform and large language model technology. Together, the companies will deliver [AI-enabled solutions](#) that integrate directly into clients' core business systems.

"Businesses are not just looking for AI tools. They are looking for expertise," said Ann Teschendorf, CEO of Covalent Resource Group. "AI can create a meaningful advantage, but it also carries responsibility. Our role is to help clients apply it where it drives measurable performance and avoid it where it introduces exposure."

What brought CRG and ExitPi together was more than complementary capabilities, it was a shared belief that AI done right starts with asking the hard questions. CRG's approach begins not with a solution but with a deep examination of what a business is truly trying to achieve. ExitPi brings to every engagement an uncommon commitment to responsible AI, addressing bias, accountability, and long-term impact in ways most vendors aren't yet having with their clients. Together, that combination produces something the market rarely offers: AI that is both strategically grounded and responsibly built.

Ann Teschendorf CEO Covalent Resource Group

“AI is reshaping how organizations create value, from customer interactions to internal operations,” said Ryan Edgar, co-founder of ExitPi. “Our proprietary large language model platform enables intelligence to be embedded directly into the systems teams rely on every day. The result is not just faster processes, but smarter workflows and more adaptive, high-performing businesses.”

The partnership reflects a growing shift toward embedding intelligence within core business operations, rather than layering on disconnected AI tools.

By combining strategic advisory, agile execution, and proprietary AI infrastructure, Covalent Resource Group and ExitPi are setting a new standard for responsible, scalable AI enablement.
