

# Opreto Becomes a Partner with Databricks and Sisense

*Opreto announces partnerships with Databricks and Sisense to advance enterprise data, AI, and analytics platform delivery.*

WINDSOR, ONTARIO, CANADA, April 14, 2026 /EINPresswire.com/ -- [Opreto Corporation](#) today

They are part of our long-term effort to build the most trusted software development consultancy in the Great Lakes region"

*Xavier Spriet*

announced that it has partnered with Databricks and Sisense, enhancing its ability to help organizations build and operate complex data, AI, and analytics systems. These partnerships support Opreto's work in designing and delivering production-ready platforms for organizations operating in technically demanding environments and reflect the company's broader goal of becoming the most trusted software development consultancy in the Great Lakes region.

Despite ongoing investment in AI and data, many organizations still struggle to turn those investments into reliable production systems. Data remains siloed, governance is inconsistent, and moving from pilot to production often brings risk, cost, and delays. Opreto's approach is to close that gap by aligning architecture, data, and execution into a unified delivery model.

"Most organizations are not short on tools or ideas. The real challenge is turning those into systems that can run consistently under real conditions, where performance, reliability, and accountability actually matter," said Xavier Spriet, Vice President and Co-founder of Opreto. "These partnerships strengthen our ability to deliver end-to-end, from data foundations through to production systems teams can depend on, and they are part of our long-term effort to build the most trusted software development consultancy in the Great Lakes region."

As a Databricks partner, Opreto expands its ability to design and implement unified data and AI platforms, including governed data foundations, scalable pipelines, and production-grade machine learning systems integrated into business workflows.

As a Sisense partner, Opreto extends its embedded analytics capabilities, helping organizations surface insights directly within the systems their teams already use. This is especially relevant in environments where decisions need to be made quickly and based on reliable, contextual data.

Together, these partnerships reinforce Opreto's focus on delivering complex systems end-to-end, particularly in environments where failure is costly and timelines are tight.

What this enables for clients

Unified data and AI platforms with governance, lineage, and audit-ready controls

Scalable pipelines that reduce fragmentation and improve system reliability

AI systems that move from pilot to production with clearer performance and cost visibility

Embedded analytics and intelligence within operational workflows

Integration across enterprise and domain-specific systems

Opreto works with organizations that lack the internal capacity to execute large, complex initiatives, providing senior delivery teams across software architecture, data engineering, and system integration.

About Opreto

Opreto is a technology partner that helps organizations design, build, and operate complex software and data systems. The company provides senior delivery teams across architecture, data, and engineering, supporting clients in regulated and technically demanding industries.

About Databricks

Databricks is the Data and AI company. More than 20,000 organizations worldwide — including adidas, AT&T, Bayer, Block, Mastercard, Rivian, Unilever, and over 60% of the Fortune 500 — rely on Databricks to build and scale data and AI apps, analytics and agents. Headquartered in San Francisco with 30+ offices around the globe, Databricks offers a unified platform that includes Lakebase, Genie, Agent Bricks, Lakeflow, Lakehouse, and Unity Catalog.

About Sisense

Sisense is a leading Analytics Platform as a Service (AnPaaS) that empowers users to build business analytics and accelerate product innovation by equipping product and development teams with a complete suite of no-, low-, and pro-code tools. Sisense integrates AI-powered insights and analytics into data products in a modular, flexible, and scalable way.
