

# USB Network Gate Introduces Free Version for Personal Use

*New free edition provides basic USB over Network access, ideal for personal use.*

RESTON, VA, UNITED STATES, April 16, 2026 /EINPresswire.com/ -- Electronic Team, Inc. has released a [free version](#) of [USB Network Gate](#), professional software for accessing USB devices over a network (LAN/WAN/Internet) in RDP sessions or virtual machines. The new edition is intended for personal, non-commercial use and offers a way for users to work with remote USB devices at no cost.

The release comes with several limitations:

- The free version allows users to share one USB device at a time. It is intended for situations where occasional remote access to a single peripheral is needed, as opposed to the 10-device limit of the paid license.
- Users must reconfigure the shared device after each application restart or connection drop.
- The free version is also limited to non-commercial use.

USB Network Gate is used to remotely connect to USB peripherals, including printers, scanners, card readers, dongles, and other hardware that typically require a direct physical connection. The introduction of the free edition expands access to USB over Network technology for individuals who need a lightweight option for personal use or want to evaluate the app before purchase.
