

WISPR Systems' SkyScout 2+ Earns Blue UAS List

Approval Validates Platform for Federal and Public Safety Deployment

BATESVILLE, MS, UNITED STATES, April 17, 2026 /EINPresswire.com/ -- WISPR Systems, a U.S.-based manufacturer of secure unmanned aircraft systems, announced today that its SkyScout 2+ has been approved for inclusion on the [Blue UAS](#) list, reinforcing the platform's readiness for deployment across federal, public safety, and regulated commercial operations. The Defense

Contract Management Agency's (DCMA) Blue UAS Cleared List evaluates unmanned aircraft systems for cybersecurity, supply chain security, and operational integrity.

WISPR Systems' SkyScout 2+

“

With SkyScout 2+, agencies don't have to compromise between cybersecurity assurance and field performance.”

John McArthur, Chief Revenue Officer at WISPR Systems

Blue UAS approval reflects rigorous evaluation of the platform's cybersecurity safeguards, supply chain integrity, system architecture, and operational reliability. Inclusion on the list streamlines federal procurement while providing infrastructure, utility, and enterprise operators added assurance that SkyScout 2+ meets stringent security and compliance standards.

“Blue UAS approval removes a significant barrier for federal and public safety agencies that need secure, NDAA-

compliant systems they can deploy immediately,” said John McArthur, Chief Revenue Officer at WISPR Systems. “With SkyScout 2+, agencies don't have to compromise between cybersecurity assurance and field performance. This designation accelerates procurement and reinforces our commitment to building mission-ready platforms in the United States.”

Operators no longer have to choose between compliance and performance. This platform provides both.

Built for Secure, Reliable Deployment

SkyScout 2+ was engineered with compliance and operational resilience at its core. The platform incorporates AES-256 encrypted communications, vetted domestically sourced components, hardened system architecture, and secure U.S.-based design, assembly, and lifecycle support.

This foundation enables trusted deployment for federally funded programs, public safety missions, infrastructure inspection, and other regulated environments.

Performance Without Compromise

Beyond its compliance architecture, SkyScout 2+ delivers field-ready performance across demanding operational environments. The platform features long-range obstacle detection with precision terrain following, EMI protection for high-interference operations, and intelligent power and thermal management for sustained missions in extreme conditions. Its WISPR SkyBoss™ controller provides AES-256 encrypted transmission, IP55 protection, and extended runtime.

Strengthening Procurement Confidence

Blue UAS inclusion streamlines federal procurement and supports organizations that must meet NDAA and cybersecurity compliance standards.

The SkyScout 2+ is available now through WISPR Systems and authorized distributors.
