

Aiarty Image Enhancer V3.11 Introduces Precision Color Control and Quick Editing Tools for AI Image Enhancement

Aiarty Image Enhancer V3.11 enhances the image enhancement process with integrated editing tools, refined color control, and improved preview accuracy.

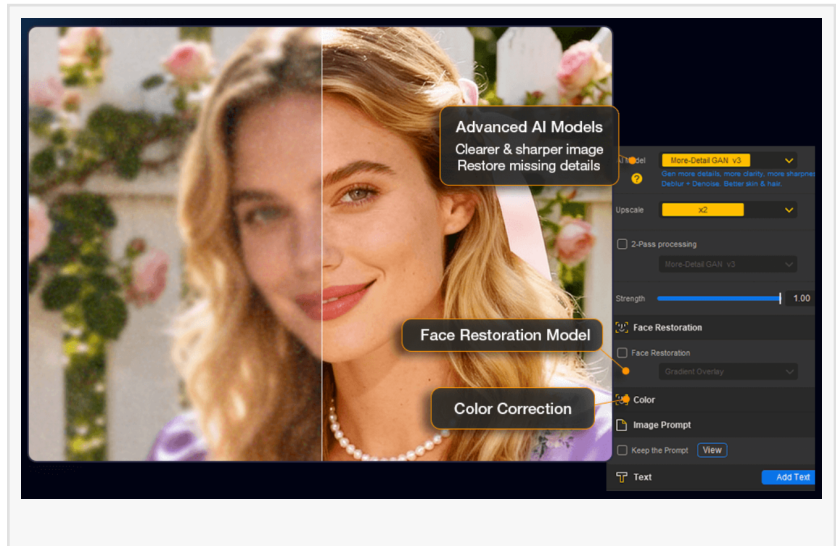

CHENGDU, SICHUAN, CHINA, April 21, 2026 /EINPresswire.com/ -- Aiarty, the AI-focused brand of Digiarty Software, today announced the release of [Aiarty Image Enhancer](#) V3.11, introducing a more streamlined AI image enhancement pipeline with integrated editing tools, improved color control, and enhanced TIFF preview accuracy.

The update is designed to help photographers, e-commerce sellers, and content creators achieve high-quality results more efficiently without switching between multiple editing tools, while enabling more precise color adjustments and more predictable results during fine-tuning.

“

By combining composition adjustments, AI enhancement, and precise color tuning into a single workflow, users can achieve better results faster and with greater confidence.”

Jack Han, CEO of Aiarty

These improvements support a more consistent and efficient image enhancement workflow across different use cases.

From Fragmented Steps to a Unified Workflow

In many real-world workflows, image editing and enhancement are often handled in separate steps such as cropping in one tool, refining in another, and applying AI enhancement afterward. This fragmented process can slow down production and interrupt creative flow.

With V3.11, Aiarty integrates essential image adjustments directly into its AI enhancement pipeline, allowing users to crop, rotate, and flip images at any stage of the image enhancement process to refine composition and correct alignment.

In wildlife photography, for example, users can crop tightly around the subject to achieve a more

impactful composition while [enhancing the image](#) to recover detail and reduce noise. For e-commerce product images, quick framing and orientation adjustments can be completed alongside enhancement, helping produce listing-ready visuals faster. This integrated approach allows users to move from raw image to final output in a single, uninterrupted workflow.

Precision Meets Flexibility with Dual Color Modes

Another key upgrade in V3.11 is the introduction of two color adjustment modes that give users greater control over edits.

The default 30% fine-tuning mode allows for subtle, incremental adjustments. Compared to previous versions, the same mouse movement now results in smaller, more controlled changes, reducing the risk of overcorrection. This is particularly useful for portrait retouching, product color accuracy, and restoring old photos where natural tones matter.

For more challenging scenarios, users can switch to the 100% full adjustment mode, which enables larger, more dramatic changes. This is ideal for low-light images, underexposed shots, or situations that require broader tonal correction.

By offering both precision tuning and full-range adjustment within the same interface, Aiarty provides a more predictable and adaptable editing experience across different use cases.

Improved Preview Accuracy for Professional Formats

For professional workflows that require high-precision output, preview fidelity is essential for consistent results. Aiarty Image Enhancer V3.11 improves preview accuracy for formats such as TIFF, allowing users to view true full-resolution images during editing and ensuring greater consistency between on-screen rendering and final output, especially in detail-sensitive tasks.

High-Fidelity AI Enhancement with Improved Reliability

Beyond improvements in workflow, control, and format handling, Aiarty Image Enhancer is designed to handle a wide range of AI-powered enhancement tasks, improving image quality across diverse conditions, including:

- [Upscaling images to high resolution](#) while preserving fine details and edge clarity.
- Reducing noise in low-light and high-ISO images with improved texture retention.
- Removing blur and recovering sharpness in slightly soft or out-of-focus images.
- Fine-tuning enhancement intensity with a Strength slider to achieve more natural and controlled outputs.
- Reconstructing facial features with advanced AI face restoration for natural, clear results.
- Adjusting color, including exposure, contrast, and saturation for more balanced and accurate results.
- Expanding dynamic range with SDR-to-HDR conversion for richer tonal detail.
- Removing unwanted objects with AI-powered precision editing tools.
- Processing large image sets efficiently through batch enhancement workflows.

Together, these capabilities work in concert to generate high-resolution outputs with natural textures, balanced detail, and realistic visual quality, making the software suitable for both professional production environments and everyday creative use cases.

“We designed this update to simplify the entire image enhancement process while giving users more control over their results,” said Jack Han, CEO of Aiarty. “By combining composition adjustments, AI enhancement, and precise color tuning into a single workflow, users can achieve better results faster and with greater confidence.”

Pricing and Availability

Aiarty Image Enhancer V3.11 is available for Windows and macOS with flexible licensing options:

- Standard License (Billed Yearly, \$75, originally \$85): Includes full access to Aiarty Image Enhancer with yearly billing for up to 3 PCs or Macs.
- Lifetime License (One-time payment, \$99, originally \$155): Provides lifetime access with free future upgrades included, valid for up to 3 PCs or Macs.

Both plans are designed to accommodate different usage needs, from short-term use to long-term professional workflows. The Lifetime License offers a cost-effective option for users seeking ongoing access without recurring subscription fees.
