

INOKIM Launches the World's First Electric Scooters and E Bikes With Built In Smart Connected Display

New 2026 lineup introduces connected mobility, courier safety technology, Ghost Shield protection, and full UL2272 certified range for the US.

NEW YORK, NY, UNITED STATES, April 28, 2026 /EINPresswire.com/ -- [INOKIM](https://www.inokim.com), one of the original premium electric scooter brands in the world and a global leader in micro mobility since 2009, today announced a new generation of products that aim to redefine urban transportation: the world's first electric scooters and electric bikes with built in smart connected display. The collection will make its global debut at the Shanghai International Bicycle Show, May 5 to 8, 2026, Booth E1 0526.

Alongside the technology launch, INOKIM is also entering the electric bike market for the first time in the company's history with a new connected platform designed for couriers, city commuters and professional riders.

A Safety Revolution For Couriers Worldwide

Thousands of delivery riders around the world rely on smartphones for navigation, order management and communication while moving through traffic. INOKIM says its integrated smart connected display system creates a safer riding experience by placing navigation, calls, messages and music directly on a built in display, helping riders keep both hands on the handlebar and eyes on the road.

Three Major Headlines Behind The Launch

1. World First Built In Smart Connected Display Scooter

INOKIM presents the world first electric bike with built in smart connected display - Dubai Collection.

INOKIM says it is the first company to integrate a complete built in smart connected display system into an electric scooter. The new flagship Light 3 includes smart connected display, built in GPS, premium comfort and a design engineered for intensive daily riding.

2. Ghost Shield Next Generation Smart Protection

INOKIM also unveiled Ghost Shield, a new intelligent protection package that includes built in alarm, built in GPS, rider control features and a triple layer anti theft architecture.

3. Dubai Collection Already Sold Out

The company stated that its new Dubai Collection premium limited edition sold out its initial inventory within 48 hours, signaling strong early demand.

INOKIM Enters The E Bike Market

For the first time, INOKIM is launching a new line of electric bicycles featuring built in smart connected display. The company says the bikes are tailored for urban mobility, delivery fleets and high mileage daily riders.

Ready For Global Markets

INOKIM stated that every model in its 2026 lineup is UL2272 certified, a leading North American safety standard for personal electric mobility devices. The company added that CE, FCC and RoHS marks support retail and B2B expansion across the United States, Europe, the Gulf region, Latin America, Asia and Australia.

Founder Quote

New INOKIM electric bike featuring built in smart connected display, fat tires and INOKIM signature green wheels.

INOKIM 2026 Collection - The most technological scooter in the world. UL2272 certified. Shown against the Dubai skyline.

Existing mobility technology has not kept up with the speed of urban life. If we can give a courier smart navigation directly in front of the rider, hands free, that is not just innovation, it is a real contribution to safety. Couriers are getting hurt every day, and we refuse to accept that as normal.
