

is*hosting Becomes Official Coolify Sponsor, Launches Pre-Installed Coolify Image on VPS

European hosting provider backs the open-source self-hosting movement with sponsorship and a production-ready Coolify VPS in 40+ countries from \$10.19/mo.

TALLINN, HARJU MAAKOND, ESTONIA, April 29, 2026 /EINPresswire.com/ -- [is*hosting](#), an

Supporting open source is not charity for us. Coolify users are exactly the audience we built our infrastructure for — developers and teams who want full control."

*Misha Malikin, Brand & Partnerships Manager at is*hosting*

international hosting and infrastructure provider, has launched a pre-installed [Coolify](#) image on its VPS platform, available across more than 40 server locations on five continents. The company has also become an official sponsor of the Coolify open-source project through GitHub Sponsors.

What launched

Coolify is an open-source, self-hostable platform for deploying applications, databases, and services — an alternative to platforms like Heroku, Vercel, and Netlify. It follows a "bring your own server" model: users install Coolify on a VPS they control and manage their entire

deployment stack from a single dashboard.

is*hosting customers can now select a pre-installed Coolify image when ordering a VPS. No manual installation. No SSH setup scripts. The server arrives ready to use — with Coolify configured and accessible through its web interface.

The image is available on all is*hosting VPS plans that meet Coolify's minimum requirements. The entry-level compatible plan (Start) includes 2 vCPU, 2 GB RAM, and 30 GB SSD storage starting at \$10.19 per month. All plans include KVM virtualization, 1 Gbps connectivity, and free weekly backups.

Why it matters

Self-hosting has been growing steadily as developers and small teams look for alternatives to managed platforms — driven by cost, data control, and flexibility. Coolify has become one of the most popular tools in this space, with more than 52,000 stars on GitHub and a community of over 19,000 members on Discord.

However, most hosting providers that support Coolify as a pre-installed option are concentrated in a limited number of regions — primarily the US and Western Europe. For teams that need servers closer to their end users in Asia, Latin America, the Middle East, or Eastern Europe, options have been limited.

is*hosting operates VPS infrastructure in more than 40 countries across five continents. The addition of a pre-installed Coolify image means that a developer in São Paulo, a SaaS team in Singapore, or a startup in Istanbul can deploy a fully functional self-hosting platform on a nearby server — without latency trade-offs and without manual setup.

Sponsorship and open-source commitment

Alongside the product integration, is*hosting has joined as an official Coolify sponsor through GitHub Sponsors.

The initiative is part of is*hosting's broader Hosting for Good program, through which the company supports open-source projects and non-commercial initiatives that make internet infrastructure more accessible.

Technical details

Coolify requires a minimum of 2 CPU cores, 2 GB of RAM, and 30 GB of storage to operate. The pre-installed image is available on all is*hosting VPS plans that meet these requirements.

The entry-level option is the Start plan at \$10.19 per month, which includes 2 vCPU, 2 GB RAM, 30 GB SSD, and 3 TB of bandwidth — enough to run Coolify with a small number of services. The Medium plan (\$21.24/mo) adds a third CPU core, 4 GB RAM, and unmetered bandwidth, making it a practical choice for developers running several applications. For production workloads with 5+ services, the Premium plan at \$31.99 per month provides 4 vCPU, 8 GB RAM, and 50 GB SSD. Higher-tier plans (Elite at \$47.99/mo and Exclusive at \$71.99/mo) are available for teams that need 16–32 GB RAM and up to 100 GB of storage.

All plans run on Xeon processors with KVM virtualization, include a 1 Gbps network port and

weekly off-site backups, and are available in 40+ locations globally.

Availability

The pre-installed Coolify image is now available to all is*hosting VPS customers. New customers can select it during the order process. Existing customers can request the image through the is*hosting control panel or by contacting support.
