

The Poultry Feed Mycotoxin Binders and Modifiers Market is projected to grow to \$4 billion by 2030

The Business Research Company's The Poultry Feed Mycotoxin Binders and Modifiers Market is projected to grow to \$4 billion by 2030

LONDON, GREATER LONDON, UNITED KINGDOM, May 5, 2026

[/Einpresswire.com/](https://www.einpresswire.com/) -- "The poultry feed mycotoxin binders and modifiers

sector has been steadily evolving, driven by increasing concerns over feed safety and animal health. As the poultry industry expands globally, the market for these specialized additives continues to gain traction, shaped by technological progress and changing consumer preferences. Let's explore the market's current status, its growth drivers, regional outlook, and future possibilities.

Expected to grow to \$4.07 billion in 2030 at a compound annual growth rate (CAGR) of 4.9%"

The Business Research Company

Understanding the Poultry Feed Mycotoxin Binders and Modifiers Market Size and Growth

The market for poultry feed mycotoxin binders and modifiers has shown consistent growth over recent years. It is projected to increase from \$3.22 billion in 2025 to \$3.35 billion in 2026, representing a compound annual growth rate (CAGR) of 4.1%. This expansion during the

historical period has been fueled by the high incidence of mycotoxin contamination in poultry feed, the growing poultry sector, historically limited effective feed additives, strict food safety and feed regulations in Europe and North America, and heightened awareness among poultry farmers about animal health.

The Business Research Company

continue its steady climb, reaching \$4.07 billion by 2030 with a CAGR of 4.9%. The forecast period's growth will be supported by innovations in enzyme and biological modifier technologies, increasing demand for organic and natural feed additives, expansion of poultry farming across Asia-Pacific, wider adoption of precision feeding methods, and partnerships between feed additive producers and poultry integrators. Prominent trends expected to shape this market include greater use of enzyme-based mycotoxin modifiers, rising preference for clay and silicate-based binders, the development of both liquid and dry feed additive formats, improved awareness about mycotoxin risks, and the emergence of customized feed additive solutions.

What Poultry Feed Mycotoxin Binders and Modifiers Are and How They Work

Poultry feed mycotoxin binders and modifiers are specialized feed additives incorporated in small amounts to capture and neutralize mycotoxins present in poultry feed. These compounds function by adsorbing mycotoxins within the digestive system of poultry, helping to protect the animals from the toxic effects that can compromise their health and productivity.

Increasing Meat Consumption as a Key Growth Driver in the Poultry Feed Mycotoxin Binders and Modifiers Market

One of the main factors propelling the poultry feed mycotoxin binders and modifiers market is the growing global demand for meat. As incomes rise, consumers are able to afford meat more regularly, making it a staple in their diets. These mycotoxin binders and modifiers play a crucial role in reducing the presence of harmful toxins in poultry, ensuring safer meat consumption. For example, the Food and Agriculture Organization (FAO), a United Nations agency based in Italy, projects that poultry meat consumption will reach 91 million tons by 2032, marking a 15% increase over the next decade. This upward trend in meat consumption is thus a significant driver for the expansion of the poultry feed mycotoxin binders and modifiers market.

Regional Overview of the Poultry Feed Mycotoxin Binders and Modifiers Market

In 2025, North America led the poultry feed mycotoxin binders and modifiers market in terms of size. The market analysis also spans regions including Asia-Pacific, South East Asia, Western Europe, Eastern Europe, South America, the Middle East, and Africa, providing a comprehensive view of the market's global landscape and regional growth patterns.
