

# West Pest Co. Expands Service Awareness for Santa Cruz Residents Seeking Local Pest Control

*Local pest control provider addresses growing homeowner demand for professional extermination services across Santa Cruz County*

SANTA CRUZ, CA, UNITED STATES, May 7, 2026 /EINPresswire.com/ -- West Pest Co., a locally owned [pest control company serving Santa Cruz County](#), is expanding its outreach efforts to better serve homeowners and businesses across the region seeking [professional pest management solutions](#). The initiative reflects a broader pattern of increased demand for local, accountable pest control providers in coastal California communities where year-round pest activity presents ongoing challenges for residential and commercial property owners.

West Pest Co.

Santa Cruz County's mild, fog-influenced climate creates conditions that support pest activity across all four seasons. Unlike inland regions where cold winters suppress pest populations, Santa Cruz homeowners face persistent pressure from rodents, ants, cockroaches, wasps, and other common pests throughout the year. This sustained activity has driven increased interest in professional pest control services that go beyond seasonal treatment — with residents seeking providers who understand local conditions and respond quickly when problems arise.

West Pest Co. offers a range of residential and commercial pest control services tailored to the specific pest pressures found in Santa Cruz County and surrounding communities. Services include rodent control, ant extermination, wasp and yellow jacket removal, cockroach treatment, spider control, flea and tick treatments, [aphid and garden pest management](#), and general interior pest treatments. The company serves communities throughout the county, including Capitola, Scotts Valley, Aptos, Felton, and Watsonville, among others.

We hear from homeowners regularly who have tried to handle pest problems on their own without success”

*Matthew West*

The company's approach prioritizes targeted, eco-friendly treatments designed to address active pest issues with minimal environmental impact. Treatments are formulated to be safe for families, children, and pets — a consideration that has become increasingly important to Santa Cruz County residents who express concern about chemical exposure in and around their homes.

"We hear from homeowners regularly who have tried to handle pest problems on their own without success," said Matthew West, owner of West Pest Co. "What we find most often is that the issue has been present longer than they realized, or the source hasn't been identified. Our focus is on finding the actual problem and addressing it in a way that makes sense for the home and the people living in it."

The pest control industry has experienced sustained growth nationally as more property owners move away from DIY approaches in favor of professional services. In California, this shift has been accompanied by increasing consumer preference for environmentally responsible methods and transparent service practices. Integrated pest management techniques, which focus on targeted intervention rather than broad chemical application, have gained traction among providers and regulators alike.

California's Department of Pesticide Regulation has placed growing emphasis on access to sustainable pest management alternatives and has outlined priorities that align with reduced-risk treatment protocols. West Pest Co.'s treatment practices reflect these evolving standards, with an emphasis on targeted applications, exclusion techniques, and preventative recommendations that help property owners reduce conditions that attract pests in the first place.

West Pest Co. also maintains a fast response standard for urgent pest situations, with the ability to reach clients within one to four hours for active infestations. The company operates under full state licensing and holds a strong all-time customer rating, reflecting consistent service outcomes across a range of property types and pest categories.

The Santa Cruz County region presents unique pest management challenges rooted in its geography and climate. Coastal fog, moisture retention, and mild temperatures create favorable conditions for a wider variety of pests than many parts of California experience. Rodents, for example, tend to seek indoor shelter earlier in the fall than in drier regions, while ants remain active well into the winter months. Cockroaches, spiders, and fleas can persist year-round in protected indoor environments, making periodic inspection and treatment a practical consideration for local property owners.

For homeowners and businesses seeking professional pest control services in Santa Cruz

County, West Pest Co. offers inspections, targeted treatments, and preventative recommendations with no high-pressure service agreements. The company can be reached by phone or through its website for service inquiries.
