

Script Runner and Dream Payments Partner to Launch Dream DriverPay, Transforming Healthcare Delivery Driver Payouts

Dream DriverPay enables Script Runner's delivery drivers to receive earnings by Interac e-Transfer in under 30 minutes, with no banking details required.

TORONTO, ONTARIO, CANADA, May 7, 2026 /EINPresswire.com/ -- Script Runner, the healthcare logistics platform used by hundreds of pharmacies across Canada to power thousands of prescription deliveries every day, today announced a partnership with Dream Payments to launch Dream DriverPay, an embedded payout solution rolling out in Canada in Q2 2026.

Dream DriverPay replaces manual payout workflows with a digital experience powered by Dream Payments and delivered through Interac e-Transfer for Business, one of Canada's most widely used real time payment services. When the pay cycle closes and payroll is approved, drivers receive earnings using only a mobile number or email address. Funds land in under 30 minutes. No bank account number. No transit number. No void cheque.

For prescription delivery drivers, this creates a simpler, faster, and more reliable payment experience. For newcomers to Canada, underbanked drivers, or drivers uncomfortable sharing banking information, it removes a long standing friction point in logistics payroll. For Script Runner, payroll approval and payout execution now happen inside one workflow, without moving between the driver management platform and a bank portal.

Script Runner powers prescription delivery across distributed healthcare networks, helping pharmacies, healthcare providers, and logistics partners coordinate medications to patients safely and on time. As healthcare delivery networks have scaled, the systems used to coordinate the work have become increasingly digital, while the systems used to pay the people doing the

work have often remained separate, manual, and slow. Dream DriverPay closes that gap by embedding payout execution directly into the operational workflow.

The launch extends Dream Payments' role as a leading Canadian platform for embedding faster payments into healthcare and insurance, where its infrastructure is already used to move money to workers' compensation recipients, disability claimants, insurance customers, and healthcare related payees. Driver payouts are a natural extension of that same infrastructure. People who have earned money should not have to wait days or weeks to receive it.

"Drivers nationwide deliver critical medications to patients every day. The least we can do is pay them quickly, simply, and without making them hand over banking details," said Suresh Bhat, CEO of Script Runner. "Partnering with Dream allows us to execute fleet payroll in one system and pay drivers by email or text in minutes. That is a major step forward for the fleets we power, and we expect it to meaningfully improve driver retention and satisfaction."

"Healthcare and insurance are where faster, trusted money movement matters most, and we built Dream DriverPay to bring that same speed and trust to the people moving medication to patients every day," said Brent Ho-Young, CEO of Dream Payments. "Together with Script Runner, we are bringing Interac e-Transfer driver payouts to every pharmacy in their network, paying drivers in minutes using only a mobile number or email address, with no banking details required. The companies that win the next decade will embed faster money movement directly into the workflow where the work happens. That is exactly what we are doing with Script Runner."

Following the Canadian launch in Q2 2026, Dream and Script Runner plan to expand the service to additional healthcare delivery networks and other categories of healthcare workforce payments.

About Script Runner

Script Runner is a healthcare delivery and logistics platform that enables pharmacies, healthcare providers, and logistics partners to coordinate prescription delivery across distributed networks. Its platform supports delivery orchestration, AI powered logistics, compliance, and reconciliation. Script Runner has pioneered innovations including AI powered delivery optimization, integrations with on demand delivery networks such as Uber Direct, and Canada's first long distance drone delivery for prescriptions.
