

# Hosted.com® Highlights YouTube Channel for Self-Help Resources

*Hosted.com® highlights its YouTube channel as a visual learning resource for managing websites and hosting, WordPress, domains, and Website Builder.*

CA, UNITED STATES, May 21, 2026 /EINPresswire.com/ -- Hosted.com®, a domain name and web hosting provider, is placing focus on its YouTube channel as part of its wider self-help resource offering. The channel gives website owners, small businesses, and WordPress users access to video tutorials, short-form tips, and step-by-step guidance designed to make running and managing their websites easier.

“

Support isn't just written instructions. People learn faster by seeing the process. Our YouTube channel offers a way to follow website, WordPress, and hosting management with more confidence.”

*Wayne Diamond*

The announcement reflects the growing role of video in learning. Website owners, especially beginners, often need to identify menus, settings, dashboards, and see on-screen results while completing tasks. Video content helps support that process by showing each step in context, allowing viewers to pause, replay, and follow along at their own pace.

[Hosted.com®'s YouTube channel](#) supports a range of website-related topics, including WordPress, the Hosted.com® Website Builder, online store setup, site management, plugin and theme installation, category

management, and content publishing. The channel also includes YouTube Shorts for shorter tips and focused explanations.

While written resources remain important for detailed reference, visual learning can reduce uncertainty during hands-on tasks. This is especially useful for people working with website

builders, WordPress admin areas, hosting dashboards, or control panels for the first time. Instead of relying only on written steps, viewers can see what an action looks like before repeating it for themselves.

The channel is part of the company's [broader self-help resources](#), which also includes its Knowledgebase, Blog, and Articles & Tutorials section. Together, these resources offer website owners different ways to find information based on the type of help required and their preferred learning format.

"Clear support is not limited to written instructions," said Wayne Diamond, CEO of Hosted.com®. "Many website owners understand a task faster when they can see the process on screen. The Hosted.com® YouTube channel gives them another practical way to follow website, WordPress, and hosting management and troubleshoot with more confidence."

Longer tutorial videos provide more detailed walkthroughs for tasks that require several steps. These include guidance on using the Website Builder, launching an online store, and managing websites. The [WordPress Hosting](#) videos cover common actions such as installing plugins and themes, publishing content, and organizing website categories.

Short-form videos also play a role in the channel's structure. YouTube Shorts are used for concise explanations and quick task-based guidance where a full tutorial is not required. This format helps address smaller questions or specific actions more directly.

For website owners managing their own online presence, access to both written and visual resources can support more independent problem-solving. A person may use a blog article or a Knowledgebase guide for reference, then turn to a video to see how the steps work in practice.

This combination helps bridge the gap between reading instructions and completing the task on screen while fitting into the company's wider self-help resources for Web Hosting, WordPress
