

TFSF Ventures Opens Agent Deployment at Fifteen Thousand Dollars

TFSF Ventures FZ-LLC launches a four-agent production deployment package at fifteen thousand dollars with full code ownership and no recurring fees.

DUABI, UNITED ARAB EMIRATES, May 14, 2026 /EINPresswire.com/ -- TFSF Ventures FZ-LLC, a venture architecture firm with 27 years in payments and software and four years of production AI agent delivery across 21 industry verticals, today announced a [fifteen thousand dollar deployment package](#) that makes [production agent infrastructure available to businesses](#) that operate below the enterprise threshold.

The Market Has a Missing Middle
The AI deployment market has split into two tiers that leave most

businesses stranded. On one end, enterprise organizations invest six and seven figures for full-operation deployments spanning dozens of agents across departments. On the other, off-the-shelf automation tools offer templated workflows that break the moment a business needs something tailored to how it actually operates.

Between those two tiers sits the majority of operating businesses. A four-attorney litigation firm. A regional mortgage brokerage processing six hundred files a year. A dental group managing three locations. A third-party logistics provider coordinating forty carriers. These organizations generate enough operational complexity to benefit from production agents but have had no deployment path priced for their scale. The firm built one.

Four Agents. Fifteen Days. Full Ownership.

The package delivers four customized production agents deployed into the client's existing

TFSF Ventures FZ LLC

infrastructure within fifteen days. Each engagement begins with the same operational assessment methodology used in the firm's enterprise deployments, identifying the three to five workflows where agent automation creates the highest measurable lift.

Every deployment transfers complete source code to the client. No recurring platform fees. No vendor lock-in. No restrictions on modification or resale of derivative work. Phase One is designed to be operationally complete on its own. If four agents solve the problem, the engagement is finished and the client owns everything.

Expansion Without Obligation

Clients who identify additional automation opportunities after deployment can move to Phase Two at a reduced rate, because the foundational architecture from Phase One carries forward. There is no timeline pressure and no contractual obligation to expand. Enterprise engagements remain the appropriate path for organizations requiring full-operation deployment across twenty or more agents, multiple departments, and complex integration architectures. The firm continues to serve those clients through dedicated engagement structures built for that scale and scope.

Built for Operators, Not Experimenters

The fifteen thousand dollar package is not a pilot program. It is not a proof of concept. It delivers the same production-grade agent infrastructure deployed in enterprise environments, scoped to four agents and focused on highest-impact workflows. The firm currently deploys validated agent configurations across law, mortgage, insurance, healthcare, logistics, financial advisory, construction, staffing, private equity portfolio operations, and eleven additional verticals.

Getting Started

Businesses evaluating whether production agents fit their operations can begin with the firm's [operational assessment at tfsfventures.com/assessment](https://tfsfventures.com/assessment). The 19-question assessment identifies which agent configurations apply to the client's specific workflows and delivers a custom deployment blueprint within 48 hours. No sales call required.
