

Rejuva Fresh Unveils Enhanced 2026 Adonis™ II Series for Advanced Body Contouring

New 2026 Adonis™ II lineup features upgraded components, advanced cavitation performance, and expanded multi-function treatment capabilities.

ELLSWORTH, ME, UNITED STATES, May 16, 2026 /EINPresswire.com/ -- [Rejuva Fresh®](https://www.rejuvafresh.com) has just unveiled its brand-new [2026 Adonis™ II Series](https://www.rejuvafresh.com), marking an exciting rollout for the leading U.S.-based aesthetic device manufacturer. This cutting-edge line brings the latest advancements in desktop cavitation and body contouring directly to med spas, wellness clinics, salons, and fitness facilities.

Long regarded as one of the most popular compact body contouring systems in the aesthetic industry, the Adonis™ line has built a strong reputation among providers for combining powerful cavitation technology, RF skin tightening, vacuum lymphatic treatments, lipo laser, and body sculpting functionality in a compact, accessible platform.

“

As always, Rejuva Fresh continues investing in product development, research, provider support, and practical innovations that help aesthetic businesses grow.”

Polly Jacobs, Founder and CEO of Rejuva Fresh

The upgraded 2026 Adonis™ II Series expands the line with both 30KHz and 40KHz cavitation options, available in 6-in-1 and 9-in-1 configurations depending on provider treatment goals and practice needs.

The new series introduces several important upgrades over previous Adonis™ generations, including PowerSync Matrix™ technology, designed to optimize energy transmission while reducing vibration, along with DefyDrop™ technology for improved durability and protection in high-use professional environments.

Rejuva Fresh also redesigned the overall appearance and structure of the machines to better complement modern high-end spa and clinic environments.

The 30KHz systems are designed for deeper penetration and enhanced treatment support for medium and thicker fat layers, while the 40KHz systems provide highly effective non-invasive body sculpting, cellulite reduction, lymphatic drainage, and skin firming treatments.

Depending on configuration, the 2026 Adonis™ II Series may include technologies such as:

- Ultrasonic cavitation
- Vacuum RF lymphatic drainage
- Multipolar RF skin tightening
- Facial RF contouring
- Diode laser lipolysis
- EMS muscle stimulation
- Cryo soothing treatment
- Micro-current phototherapy

Unlike conventional cavitation systems that rely on LED, the Adonis™ II features genuine diode laser lipolysis technology, empowering practitioners with enhanced precision and better patient outcomes.

The upgraded Adonis™ II Series was developed to support growing practices seeking versatile, space-efficient treatment systems capable of addressing a wide range of aesthetic and wellness goals without invasive surgery or extended downtime.

“As always, Rejuva Fresh continues investing in product development, research, provider support, and practical innovations that help aesthetic businesses grow,” Jacobs added.

Each system includes training, protocols, marketing support, and lifetime technical support through Rejuva Fresh School and the company’s expansive and deep customer support network.

About Rejuva Fresh, LLC.

Rejuva Fresh® is a leading aesthetic equipment developer based in the United States and prioritizes offering powerful state-of-the-art technology combined with top-notch customer support. One of the fastest-growing companies in the aesthetic device industry, Rejuva Fresh®
