

On Time Edge and GAINS Bring Advanced Supply Chain Optimization Within Reach for More Manufacturers

Partnership combines advanced supply chain planning with deep integration and domain expertise, making optimization practical at enterprise scale.

DENVER, CO, UNITED STATES, May 19, 2026 /EINPresswire.com/ -- On Time Edge and GAINSystems have formed a strategic partnership to expand access to advanced supply chain planning and optimization. Manufacturers continue to invest in planning systems, but many struggle to translate those capabilities into consistent operational and financial results. By combining GAINS' decision engineering platform

with On Time Edge's deep expertise in supply chain, production planning, and manufacturing systems, the partnership helps organizations turn complex planning strategies into measurable business performance—making these capabilities more accessible to mid-market manufacturers while strengthening outcomes at enterprise scale. GAINS and On Time Edge support manufacturers seeking to improve service, cost, and inventory performance across increasingly complex supply chains.

Despite continued investment in supply chain management (SCM), planning platforms, and manufacturing systems, a gap persists between supply chain planning and real-world operations. In practice, this gap shows up as:

- Underutilized advanced planning tools
- Disconnected supply chain decisions and production realities
- Technically integrated but operationally misaligned systems
- Limited specialized expertise across planning, scheduling, and execution

GAINS provides the planning and optimization layer—modeling scenarios, balancing trade-offs, and generating economically sound decisions across inventory, demand, and replenishment. On Time Edge brings deep expertise in supply chain, production planning, and manufacturing systems, integrating and operationalizing these capabilities across complex manufacturing

On Time | Edge™

On Time Edge: We are experts at deploying and integrating supply chain solutions and smart manufacturing systems – on time and within budget.

GAINS

MOVE FORWARD FASTER

Hundreds of manufacturers around the world are using GAINS to optimize their supply chain, free up working capital, and fulfill every customer promise.

Advanced planning is more accessible, but its value still depends on how well decisions connect to supply chain operations. This partnership helps organizations improve operational performance.”

*Dave Shrager, CEO of
GAINSystems*

environments.

The result is planning that is integrated, aligned with manufacturing operations, and capable of delivering measurable business outcomes.

Both organizations have experience [supporting global manufacturers across supply chain planning](#), production scheduling, and manufacturing systems, including complex multi-site and multi-industry environments.

“Manufacturers don’t struggle because they lack technology—they struggle because planning, scheduling,

and manufacturing systems aren’t aligned in a way that reflects how operations actually run day to day,” said Brian Vogel, CEO of On Time Edge. “Our focus is bringing the right combination of expertise and integration capability to ensure supply chain decisions are more consistently executed and sustained in the real world.”

“Advanced planning has become more accessible, but realizing its full value still depends on how effectively those decisions connect to real-world supply chain operations,” said Dave Shrager, CEO of GAINSystems. “This partnership helps organizations translate planning decisions into more consistent operational performance.”

This collaboration helps manufacturing organizations improve service, cost, and inventory performance by better aligning supply chain planning with production execution, including:

- Practical access to advanced supply chain optimization for mid-market manufacturers without large internal teams
- Closer alignment between supply chain planning decisions and production scheduling constraints
- More reliable service performance, including on-time-in-full (OTIF) delivery
- Reduced inventory and working capital through better-coordinated planning and execution decisions
- Greater consistency between supply chain strategy and day-to-day operational performance

About On Time Edge

Accelerate digital transformation with On Time Edge for an agile, accurate supply chain and manufacturing operations excellence. We're experts at deploying and integrating supply chain solutions and smart manufacturing systems – on time and within budget. Our #1 concern is making sure they work the way they're supposed to so your company gets the business results you expect. We are a global team of supply chain experts, smart manufacturing engineers, data and applications architects, and manufacturing business consultants who consistently apply our proven implementation and integration methodologies and disciplined project management

practices, helping you manage change in the plant and throughout the entire business. Every one of our team members is a deep domain expert in their chosen field, and we apply our understanding of your industry, so projects take off on the first try to start delivering performance results. Our clients consistently achieve sustainable value from technology investments and, as a result, dramatically improve operational performance and profitability. For more information, [visit On Time Edge](#) or connect with us.

About GAINSystems

At GAINS, we help customers keep their promises by democratizing supply chain planning. The GAINS Supply Chain Performance Optimization Platform helps businesses large and small Move Forward FasterSM with greater agility, resilience, confidence, and sustainability. Helping customers make better decisions, the GAINS AI-driven cloud platform delivers continuous cost and profit optimization via machine learning, proven algorithms, and actionable analytics for global manufacturing, distribution, retail, and service parts/maintenance operations. Innovative design combined with the GAINS Proven-Path-to-Performance (P3)SM methodology enables rapid onboarding, increased sales, inventory turns, and service levels with reduced operating costs. GAINS provides digital supply chain planning expertise to global industry leaders across aerospace and defense, automotive, medical device, consumer goods, and service parts/MRO sectors, with deployments throughout North America, Europe, Latin America, and Australia/New Zealand. For more information, [visit www.gainsystems.com](http://www.gainsystems.com).
