

Saw.com Launches SMS Text Notifications for Real-Time Domain Transaction Updates

MIAMI, FL, UNITED STATES, May 29, 2026 /EINPresswire.com/ -- Saw.com launched SMS notifications for domain deals. This matters because domain acquisitions are dying in your email inbox. Here's how it actually goes: You submit an offer. You want a response in minutes. The seller gets an email notification. They see it later. Maybe hours later. They send a counteroffer.

You're focused on your business. You don't see it until the next day. By then the seller's moved on to another buyer. Dead deal. Nobody failed. Email just killed it. This happens constantly.

"Founders were losing deals because they didn't see the negotiation happening in real time," said Jeffrey Gabriel, founder and CEO of Saw.com. "A seller sends a counteroffer. You're focused on your business. You miss the window. Deal stalls. We were watching this over and over." SMS fixes it.

A text lands on your phone immediately. You see it. You respond. The other side responds instantly. Momentum stays alive. Deals close. The feature covers the whole lifecycle.

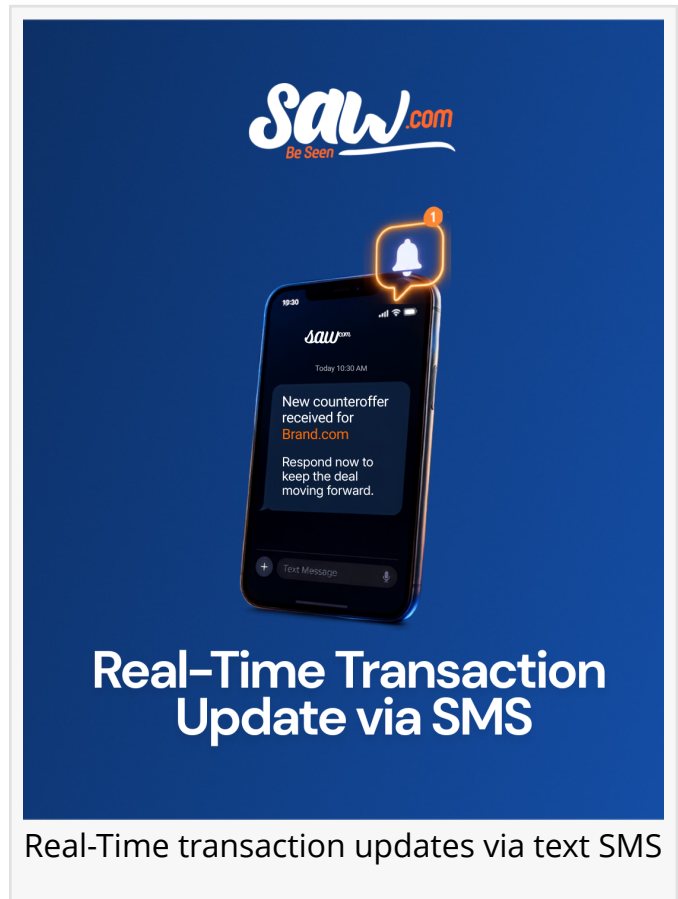

“

Domain deals are like fundraising, Speed and momentum matter. The first person to move usually wins. SMS gives everyone that edge.”

Jeffrey Gabriel

Offer submitted? Text. Counteroffer? Text. Due diligence cleared? Text. Ready to sign escrow? Text. Users choose what they want to see. No spam. No noise. Just the information that actually matters.

The impact is measurable. Deals that took three days to close now close in hours. Negotiation cycles compressed

from weeks to days. Sellers stay engaged. Buyers stay focused. Everyone knows what's happening as it happens.

This is infrastructure modernization. Email worked when deals were slow and stakes were small. But premium domains sell for hundreds of thousands, sometimes millions. That scale of capital moving through the market deserves better tools. SMS is the first step.

All Saw.com users can enable notifications now. Existing clients toggle it in account settings.

The image shows a two-part interface for enabling SMS/WhatsApp notifications. The top part is a verification screen titled 'SMS/WhatsApp notifications'. It includes a warning that notifications are paused for a specific phone number and instructions to reply with 'START' to verify the number. Below this is a phone number input field showing '+1 (911) 222-2222' and a 'Send Code' button. The bottom part is the 'SMS/WhatsApp Notification Settings' page. It has two sections: 'Self-Brokered Inquiries Notifications' and 'Brokered Inquiries Notifications'. Each section lists various events with toggle switches, all of which are currently turned 'on'. A 'Save' button is located at the bottom right of the settings page.
