“

Advanced recycling is really kind of the next step in the recycling conversation.”

David Clement, Policy Director, Consumer Choice Center

“Advanced recycling is really kind of the next step in the recycling conversation,” Clement said during the interview. “It allows plastics that historically would have gone to landfills to actually be broken down and reused in new products.”

The interview comes as lawmakers review H.R. 7502, legislation introduced Feb. 12 by U.S. Rep. Nick Langworthy (R-NY-23). The bill would establish a federal framework for

recycled-content marketing claims and direct the Federal Trade Commission to update its Green Guides related to environmental marketing standards.

During the podcast discussion, Clement said advanced recycling technologies could help address

limitations in traditional recycling systems by expanding the types of plastics that can be processed and reused.

“These technologies create an opportunity to extend the lifecycle of plastics in a way that hasn’t really existed before at scale,” Clement said. “That has implications not only for waste reduction, but also for manufacturing, supply chains and economic development.”

The Consumer Choice Center is an international consumer advocacy organization focused on promoting consumer choice, innovation and regulatory reform.
