

Cavelo Introduces AI Security Analyst to Help MSPs Address Client Risk in Minutes

New AI-powered Capability Moves MSPs Beyond Visibility by Adding Guided Action to the Security Workflow

KITCHENER, ONTARIO, CANADA, June 8, 2026 /EINPresswire.com/ -- [Cavelo](#), a leader in data security posture management (DSPM) for MSSPs and MSPs, today announced the launch of [Cora](#), an AI Security Analyst designed to help managed service providers (MSPs) and security teams identify, analyze, prioritize, and remediate cyber risk across client environments.

Built directly into the [Cavelo360](#) platform, Cora operates like AI agents that security professionals are familiar with. Users can surface vulnerabilities and risk unique to their environment or specific clients without leaving the Cavelo platform. In seconds, Cora translates security data into a guided plan of action that tells teams not just where risk exists, but what to do about it.

“

With Cora, we've turned security data into risk intelligence that works the way an MSP and their team needs it to, on demand.”

James Mignacca, CEO at Cavelo

Cavelo Inc.

James Mignacca - CEO at Cavelo

“MSPs are overwhelmed with data but still struggle to understand where real risk exists,” said James Mignacca, CEO at Cavelo. “With Cora, we’ve turned security data into risk intelligence that works the way an MSP and their team needs it to, on demand. By quickly discovering risk, understanding how attackers could exploit it, and acting on remediation, teams can confidently do their job in a fraction of the time it would ordinarily take.”

Delivering Practical AI Outcomes Across MSP Teams

The Cavelo360 platform has long helped MSPs discover, identify, and prioritize risk across client environments. With Cora, Cavelo extends the platform into a new operational layer: guidance and action. Cora closes the gap between understanding where risk exists across a client's attack surface and knowing how to reduce it, providing a direct path from visibility to action.

Cora was designed to support the real-world workflows of MSP and MSSP teams, from frontline technicians to senior security leaders. Rather than overwhelming teams with more alerts and data, Cora delivers role-specific insights that help operators move faster, make better decisions, and communicate risk more effectively.

Larry Meador, Channel Chief at Cavelo

For MSP and MSSP Leaders: Translate Risk into Recommendations — Security consultants and advisory teams need to translate technical findings into clear recommendations clients can understand and act on. By transforming complex security telemetry into understandable narratives, Cora strengthens the advisory relationship between providers and their customers.

Cora helps answer questions like:

- What's the risk story here?
- What should we recommend to the client?
- How do we communicate this to the client?

For Senior Engineers: Guided Remediation and Smarter Prioritization — Level 3 technicians and senior security engineers need broader context to identify patterns and optimize security posture across environments. By correlating vulnerabilities, identities, and attack paths, Cora helps senior teams make more informed security decisions and take targeted action. Cora helps teams answer questions like:

- Where is risk concentrated?
- Which attack paths pose the greatest exposure?
- What remediation steps are most critical?

For Level 1–2 Technicians: Faster Action, Less Manual Investigation — Frontline operators need speed and clarity when responding to security issues. By surfacing prioritized insights instantly, Cora reduces manual investigation time and guides technicians towards faster resolutions.

Cora helps answer questions like:

- What should I fix first?
- Which hosts are affected?
- What information do I need to execute successfully?

“In conversations with MSPs and MSSPs every day, we hear the same challenge: teams are stretched thin and expected to deliver stronger security outcomes with limited time, budget, and resources,” said Larry Meador, Channel Chief at Cavelo. “What operators really need isn’t more dashboards or alerts. They need clear answers about where risk exists and what to fix first. Cora is built from that reality. It helps partners gain the visibility they need, prioritize action, and deliver security value their customers can actually see and understand.”

Experience Cora from Cavelo

Cora is available now as part of the Cavelo360 platform. MSPs and security professionals can experience Cora first-hand and book a personalized demo by visiting: www.cavelo.com/request-cora-ai-early-access

About Cavelo

Cavelo helps MSPs and MSSPs deliver data security posture management (DSPM) services to their customers. Its agent-based platform provides complete visibility of sensitive data, continuous risk assessment and actionable insights that enable MSPs to strengthen security postures, meet compliance mandates, and drive new revenue streams. Built for channel scalability, Cavelo empowers partners to deliver value-added services that address today’s most pressing security challenges. Learn more at www.cavelo.com.
