

# CYPHER Learning boosts the power of personal learning agents

*CYPHER Learning announces the addition of context-awareness to CYPHER Agent, making it the most powerful personal learning agent yet*

PLANO, TX, UNITED STATES, June 8, 2026 /EINPresswire.com/ -- [CYPHER Agent](https://www.einpresswire.com/2026/06/08/cypher-agent-for-learners-is-now-context-aware) for learners is now context-aware

Building on the momentum of CYPHER Agent and its commitment to delivering the most powerful, personalized training agent on the market, [CYPHER Learning](https://www.einpresswire.com/2026/06/08/cypher-learning) is announcing a significant upgrade to CYPHER Agent for learners. The learner agent is now context-aware, bringing a new level of personalization to AI-powered learning sessions.

What's new: context-aware learning sessions

Learners can now leverage CYPHER Agent from within courses to get a snapshot of their course progress, suggest focus areas, and use course material coupled with global knowledge to deepen understanding and expand on specific topics — giving learners the best of both worlds. Learners can choose from all three Agent modes; Learn, Practice, and Assess, to get additional learning, participate in an interactive scenario to practice concepts, or to identify knowledge strengths and weaknesses.

Why it matters

CYPHER Agent delivers performance

CYPHER Learning

The Learn capability is deeply integrated into our platform as a tool that knows all about you, your courses and the skills that you are currently learning so you can learn faster and perform better.”

*Graham Glass, Founder and CTO*

The previous version of CYPHER Agent for learners offered three impactful modes—Learn, Practice, and Assess—for interactive, AI-driven learning. This update makes it even smarter and more relevant by enabling learners to anchor sessions to what they are actually working on. Specifically, learners can now:

- Focus on what's most relevant to their current course progress, rather than starting from scratch.
- Quickly identify gaps. The agent surfaces areas that may need additional review or reinforcement.
- Go deeper on course concepts using expanded

explanations and supporting global knowledge.

- Connect course material to the broader world for improved understanding and long-term retention.

This is a natural evolution of CYPHER's vision for agentic learning: AI that doesn't just respond to questions, but actively helps learners understand where they are, where they need to go, and how to get there.

## Availability

This update is available now on all CYPHER platforms.
