

Magnetic Tattoo Removal Inventor Linda Paradis Takes the Stage at Dermatology & Beauty Conference 2026 in Dubai

Linda Paradis, worldwide patent holder of Magnetic Tattoo Removal, takes the stage at Dubai's Dermatology, Skin Care & Beauty Conference as speaker and sponsor.

DUBAI, UNITED ARAB EMIRATES, June 6, 2026 /EINPresswire.com/ -- On 22 May 2026, Linda Line Paradis — researcher, inventor, and worldwide patent holder of Magnetic Tattoo Removal — delivered a featured presentation at the 2nd Dermatology, Skin Care & Beauty Conference, held at Arjaan by Rotana, Dubai Media City. Appearing as both speaker and sponsor, Paradis addressed an audience of dermatologists, aesthetic surgeons, and clinical specialists with a 15-minute evidence-based presentation on a technology she has spent years developing, patenting, and bringing to international practice.

Linda Paradis Takes the Stage at Dubai Dermatology Conference 2026

THE CONFERENCE — one of the UAE's premier gatherings of medical aesthetic professionals — provided a scientific platform that few independent aesthetic inventors have accessed. For Linda Paradis, it marked a significant milestone: the first time Magnetic Tattoo Removal has been formally presented to a room of dermatology professionals in the GCC region.

WHAT WAS PRESENTED: PATENT-BASED METHODOLOGY FOR PROGRESSIVE PIGMENT REDUCTION

Linda Paradis structured her presentation around a single, precise thesis: that the aesthetics industry has a removal problem that lasers were not designed to solve.

Her presentation covered three core areas:

* The mechanism of Magnetic Tattoo Removal — how the magnetic properties of iron oxide

pigments, present in the vast majority of Permanent Makeup and professional tattoo inks, can be engaged for controlled extraction without thermal damage to surrounding tissue.

- * Clinical differentiation — a protocol-level comparison of Magnetic Tattoo Removal outcomes versus laser and saline removal alternatives, with particular focus on iron-oxide pigments, Fitzpatrick IV–VI skin types, and Permanent Makeup correction cases where laser is clinically contraindicated.

- * The hybrid protocol — for body tattoo removal, Paradis introduced a two-phase approach combining any existing laser system with Magnetic Tattoo Removal in sequence, extending the reach of both technologies and improving outcomes for complex pigment compositions.

The presentation did not position Magnetic Tattoo Removal as a competitor to dermatology — it positioned it as a complement: a tool that expands what clinical professionals can offer clients who fall outside the safe parameters of laser treatment.

WHY THIS CONFERENCE MATTERS FOR THE REGION

The GCC aesthetic market is among the fastest-growing in the world, with the UAE in particular becoming a hub for medical tourism, aesthetic innovation, and professional training. Yet the region faces a specific clinical challenge: the predominance of darker skin phototypes across the population creates a patient cohort where standard laser protocols carry elevated risk.

Magnetic Tattoo Removal's mechanism — non-thermal, non-ablative, and validated across all Fitzpatrick skin types — addresses a gap that dermatologists in the region encounter regularly. Paradis's conference appearance was designed precisely to open that clinical conversation at the institutional level.

CREDENTIALS BEHIND THE PRESENTATION

Linda Paradis did not arrive at this conference as a practitioner with a new technique. She arrived as the inventor of a documented, patent-protected methodology with a verified international footprint:

- * Worldwide patents across 12+ jurisdictions — USA, EU, GCC, Israel, Russia, and beyond.

- * Over 2,000 certified Magnetic Tattoo Removal practitioners are currently active in GCC, North America, and Europe.

- * International training programs are in use across Italy, Romania, France, Malta, UK, UAE, Saudi Arabia, Lebanon, and across the United States.

- * Regulatory references including FDA registration, CPNP (EU cosmetic notification), ISO

standards compliance, and GCC market authorization.

This credential profile — rare for an independent inventor in the aesthetics space — allowed Paradis to engage the dermatology audience as a peer rather than a vendor.

WHAT COMES NEXT: CLINICAL PARTNERSHIPS AND REGIONAL EXPANSION

The Dubai conference appearance marks the beginning of a structured engagement strategy with the medical aesthetic community in the GCC. Linda Paradis Group is actively pursuing:

- * Referral partnerships with dermatology clinics in Dubai, Abu Dhabi, Riyadh, and Beirut — enabling physicians to direct patients requiring cosmetic tattoo removal, Permanent Makeup correction, or skin-safe eyebrow tattoo removal to Magnetic Tattoo Removal certified practitioners.
- * Clinical co-development opportunities — inviting aesthetic surgeons and dermatologists to participate in protocol documentation and outcome tracking studies.
- * Magnetic Tattoo Removal certification expansion in the GCC — with training already underway in the UAE, Saudi Arabia, and Lebanon, Linda Paradis Group is positioning the region as a core growth market for 2026–2027.

Practitioners, clinic directors, and medical professionals interested in Magnetic Tattoo Removal certification or partnership discussions are invited to contact Linda Paradis Group directly or visit the training portal.

MAGNETIC TATTOO REMOVAL CERTIFICATION TRAINING: LEARN DIRECTLY FROM THE INVENTOR

Linda Paradis Group offers the only Magnetic Tattoo Removal certification programmes taught by the inventor of the technique herself. All courses are delivered fully online through a structured e-learning curriculum, enabling practitioners worldwide to qualify without travel or scheduling conflicts.

Three certified programmes are currently available:

- * Magnetic Tattoo Removal for Permanent Makeup & Microblading — for brow, lip blush, and eyeliner specialists. Covers pigment extraction, correction sequencing, and colour migration cases.
- * Magnetic Tattoo Removal for Body Tattoo — full-body ink removal, including the hybrid laser + Magnetic Tattoo Removal protocol for complex cases.

* Magnetic Tattoo Removal Detox Protocols — Detox Lips, Snow Lips, and Detox Brows for studios adding corrective services as a standalone revenue stream.

All programmes include protocol documentation, supplier access to the proprietary E-DERMIS Ink Extractor solution, and official Linda Paradis Group certification recognised across the LPG international practitioner network.
