

Allstream Energy Partners Announced as Official Media Partner for the 2nd Annual Permian Power Conference

HOUSTON, TX, UNITED STATES, June 8, 2026 /EINPresswire.com/ -- [Allstream Energy Partners](#) and Allstream Insiders are proud to announce their participation as an Official Media Partner for the 2nd Annual Permian Power Conference, taking place June 8–9, 2026, at the Horseshoe Arena in Midland, Texas.

Following a highly successful inaugural event, the Permian Power Conference returns with even greater momentum, bringing together more than 800 attendees, over 100 sponsors, and 60+

industry-leading speakers from across the electric power, energy, and infrastructure sectors. The event has rapidly become one of the premier gatherings focused on the future of power generation, energy infrastructure, and large-scale industrial growth in the Permian Basin.

“

The Permian is where energy meets technology-AI data centers, power generation, & new energy solutions are creating opportunities for our industry. We are happy to be a partner with this leading event”

Efrain Garcia, CEO & Publisher

As the Permian Basin continues its transformation from a traditional oil and gas powerhouse into one of America's most important hubs for AI infrastructure and hyperscale data center development, the conference will serve as a critical forum for collaboration among energy producers, data center developers, power generation companies, technology providers, utilities, investors, and policymakers.

"The Permian Basin is emerging as one of the most important intersections between energy and technology in North America," said Efrain Garcia, Founder and CEO of Allstream Energy Partners. "The rise of AI-driven data

centers, behind-the-meter power generation, microgrids, battery storage, and innovative energy solutions is creating unprecedented opportunities. We are excited to partner with the Permian Power Conference to help amplify these conversations and connect industry leaders who are shaping the future of energy."

The conference comes at a pivotal time for the region. Over the last six months alone, seven gigawatt-scale AI hyperscale data center campuses have been announced across West Texas and Southeast New Mexico, creating enormous demand for reliable, scalable power solutions. As a result, Midland has become a focal point for discussions surrounding behind-the-meter power generation, natural gas monetization, grid resilience, microgrids, battery storage, nuclear technologies, and the evolving relationship between energy and artificial intelligence.

Attendees will gain direct access to the companies and decision-makers responsible for building the next generation of Permian power infrastructure, including energy producers, landowners, power developers, equipment manufacturers, fiber providers, engineering firms, ERCOT market experts, capital providers, and technology innovators.

The 2026 conference will feature a highly interactive format, including keynote discussions, main-stage panels, technical sessions, sponsor-led breakouts, and extensive networking opportunities designed to foster collaboration across multiple industries. Participants will explore power purchase agreements (PPAs), tolling arrangements, behind-the-meter contracting structures, AI infrastructure requirements, and emerging energy technologies that are redefining the Permian Basin.

For organizations looking to understand where energy, AI, and infrastructure development converge, the 2nd Annual Permian Power Conference offers a unique opportunity to engage with the people and companies driving the resilient power stack of tomorrow.
