

ClosedCast Launches Private Streaming Archive, Now Available on Roku

New platform tackles “The Archive Problem” by transforming scattered recordings into organized, private streaming archives.

DALLAS, TX, CA, UNITED STATES, June 8, 2026 /EINPresswire.com/ -- [ClosedCast](https://www.ClosedCast.com/) today launched its private streaming archive, now available on Roku and the web to help families, churches, and organizations preserve and revisit important videos that would otherwise disappear across devices, drives, cloud folders, and forgotten accounts—a challenge ClosedCast calls “The Archive Problem.”

Most people do not lose their history overnight. They lose it slowly—when event recordings live in disconnected accounts, family memories stay trapped on old phones, and valuable videos become harder to find, share, and revisit.

“

Most technology was built to help people discover something new. We built ClosedCast to help people return to what matters.”

Jay Christian, Founder

“The Archive Problem is real. I have old phones boxed away with years of memories that I plan to revisit ‘one day.’ That day rarely comes, and those videos drift out of reach,” said Jay Christian, founder of ClosedCast. The result is that meaningful videos become storage instead of experience.

ClosedCast was created to change that. “Most technology was built to help people discover something new,”

Christian said. “We built ClosedCast to help people return to what matters. We believe the most important videos in life shouldn't disappear into forgotten folders, abandoned accounts, or social media feeds. Unlike public video platforms built around algorithms and engagement, ClosedCast is designed for preservation, privacy, continuity, and long-term accessibility.

The company describes itself as a Private Streaming Archive rather than a video hosting

platform. The distinction is intentional.

Where traditional storage platforms focus on storing files, ClosedCast focuses on making important videos easy to find, organize, stream, and revisit. The platform transforms years of recordings into a private, Netflix-style viewing experience that works across web browsers, mobile devices, and television screens.

The ClosedCast [Roku app](#), now available in the Roku Channel Store, brings years of memories, teachings, and community history back to the television.

“Storage is not preservation,” Christian said. “A file sitting in a folder is not the same as a memory being revisited, a lesson being rediscovered, or a community staying connected to its history. Archives should feel alive. The Archive Problem can rob us of that over time.”

ClosedCast is built for families, churches, schools, coaches, nonprofits, and communities that depend on long-term access to meaningful video collections.

Many organizations face a growing continuity challenge as years of recordings become fragmented across systems, staff transitions, and changing technologies.

“What happens when knowledge walks out the door?” Christian asked. “What happens when the people who created years of recordings retire, move on, or can no longer maintain the systems that hold them? ClosedCast exists to ensure those stories, lessons, and experiences remain accessible for future generations.

ClosedCast is launching with a simple mission: to keep important stories alive by making them easy to preserve, share, and revisit across generations.

The platform is private by default, organized around collections and categories, and designed for viewing on the biggest screen in the house. Rather than competing for attention, ClosedCast focuses on helping communities preserve continuity, stewardship, belonging, and institutional memory.

The company’s guiding principle is simple:
Built for archives, not algorithms.

About ClosedCast

ClosedCast is a private streaming archive designed for families, churches, organizations, teams, and communities that need a better way to preserve meaningful video collections. By transforming scattered recordings into organized, accessible streaming libraries, ClosedCast helps ensure important stories remain easy to find, easy to share, and easy to revisit over time. Available on the web and through its Roku app, ClosedCast makes private archives accessible wherever people choose to watch.
