

Artificio Unifies SAP Document Automation Across ECC, S/4HANA and BTP in a Single AI-Native Platform

Artificio connects directly to SAP ECC, S/4HANA and BTP, routing invoices to FI, purchase orders to MM and sales orders to SD with no custom ABAP.

IRVINE, CA, UNITED STATES, June 8, 2026 /EINPresswire.com/ -- Artificio

Products Inc., an emerging leader in AI-powered intelligent document processing and enterprise workflow automation, today announced a unified approach to SAP document automation that connects directly to SAP ECC, S/4HANA and the SAP Business Technology Platform (BTP) from a single deployment. The platform reads incoming business documents, validates them against

live SAP master data, and posts them into the correct module, whether that is a financial posting in FI, a goods receipt in MM, or a sales order in SD, without custom ABAP development or middleware.

“

SAP runs the business, but the documents feeding it have been stuck in manual processing for decades. We built one platform that speaks SAP natively across the landscape.”

Lal Singh, Founder and CEO of Artificio Products Inc.

Most enterprises run document processes that SAP does not solve natively. Vendor invoices arrive as email PDFs. Purchase orders get printed, signed, and scanned. Sales orders come in by fax in more industries than anyone expects. Traditional document capture tools stop at producing a JSON file, which still leaves someone to map fields to the right transaction, validate against business

rules, and key the data into SAP by hand. A tool that cannot complete the transaction inside SAP is a file transfer with extra steps, not an integration.

Artificio closes that gap. The platform understands SAP module structures natively, so a document does not just get read, it completes the transaction it belongs to.

One platform across the SAP landscape

Rather than deploying a separate tool for each SAP system or module, Artificio provides a single

integration layer that spans the landscape. Companies running legacy SAP ECC, those midway through a brownfield move to S/4HANA, and those building extensions on BTP all use the same platform. This matters for organizations whose SAP estate is mixed, which describes most real-world environments.

The platform maps documents to where they belong across SAP modules. Invoices and credit notes flow into FI for financial posting and GR/IR reconciliation. Purchase orders, delivery notes, and vendor documents match against open items in MM. Sales contracts and customer orders route into SD. Each document type follows the validation and posting logic of its target module.

How the integration works

Documents enter from any channel: email inboxes, vendor portals, shared drives, FTP, or direct upload. Artificio's AI agents classify the document, extract the relevant fields, and validate them against the customer's own SAP master data so that vendor numbers, GL codes, cost centers, and material numbers are confirmed before anything posts. Clean documents post straight through to the correct SAP transaction. Exceptions route to a human reviewer with the flagged fields highlighted. Every action is logged for a complete audit trail.

Because the platform connects through standard SAP interfaces, including OData services and IDoc, customers avoid the custom Z-program development that historically tied document automation to a specific system version. This also aligns with SAP's clean core philosophy, which discourages the custom ABAP that brownfield environments accumulated over the years.

Organizations deploying the platform typically reach more than 85 percent touchless processing within three months, with the manual sorting and keying that used to consume entire mornings largely eliminated.

Built for the full SAP customer base

The unified approach is designed to serve the full range of SAP customers, from large enterprises with complex multi-module landscapes to the tens of thousands of small and mid-market SAP businesses that enterprise document automation vendors have priced out. The same platform, the same native SAP integration, scaled to the customer.

Readers can explore Artificio's approach to SAP document processing in more depth through the company's resources on [document processing for SAP S/4HANA and BTP](#), its guide to [SAP invoice automation and AP posting from email](#), the analysis of [building AI-ready document workflows inside SAP](#), and the practical look at ERP integration beyond SAP for NetSuite and Dynamics 365.

Availability

The Artificio platform is available now. Businesses can request a personalized demo or start a free trial at artificio.ai, or contact the sales team to discuss their SAP landscape.
