

Surveil Launches AI Financial Control and Opens Early Access Program for the Next Era of AI Operations

New capabilities bring AI financial accountability, control, and ROI intelligence across Azure AI, Microsoft 365 Copilot, Copilot Agents, and Claude.

CHICAGO, IL, UNITED STATES, June 9, 2026 /EINPresswire.com/ -- Surveil, a FinOps Certified Platform for cloud cost, performance, and governance, today announced the launch of Surveil for AI, a major expansion of the Surveil platform designed to deliver enterprise financial control across rapidly growing AI investments. The company also announced the opening of its Early Access Program, giving customers, partners, and prospective organizations the opportunity to gain early access to emerging capabilities while influencing product innovation through structured collaboration with Surveil's product organization.

Built into the Surveil platform, Surveil for AI provides a unified control layer across AI investments, enabling organizations to monitor, allocate, forecast, optimize, govern, and measure ROI across [Azure AI](#), Microsoft 365 Copilot, Microsoft 365 Copilot Agents, Anthropic Claude, and emerging AI services through a single operational and financial context.

“

The most valuable products are built alongside the organizations solving these challenges every day.”

Per Skanne, Chief Product Officer at Surveil

As enterprises accelerate AI adoption, spending is becoming increasingly difficult to understand, attribute, forecast, and govern. AI investments now span cloud

infrastructure, SaaS platforms, foundation models, agents, autonomous workflows, and

consumption-based services, creating a new category of financial accountability and ROI challenges that traditional cloud financial management approaches were never designed to address. At the core of Surveil for AI is Surveil's global Smart Tagging engine, which connects cloud, SaaS, and AI investments to business units, projects, applications, owners, and strategic initiatives. This unified at value and model enables organizations to establish ownership, prove business value, and connect technology investments directly to enterprise outcomes.

Surveil believes the next generation of cloud and AI management platforms require more than visibility into spending, reporting, and observability. As enterprises move from AI assistants to autonomous agents and multi-step workflows, organizations need the ability to connect consumption, ownership, governance, and business outcomes through a unified operational and financial framework that evolves in real time alongside AI environments.

Surveil for AI enables organizations to:

- Establish financial accountability across AI services, models, agents, teams, and business initiatives
- Monitor and optimize AI investments across Azure AI, Microsoft 365 Copilot, Microsoft 365 Copilot Agents, Anthropic Claude, and emerging AI services
- Improve AI cost allocation, forecasting, and budgeting accuracy
- Connect AI adoption and usage data to business outcomes, investment performance, and measurable ROI
- Apply governance and operational controls across emerging AI workloads

The announcement builds on Surveil's recently expanded [co-development strategy](#) with the FinOps Foundation community, where practitioner insight, operational workflows, and real-time enterprise data continue to influence product innovation. Through the Early Access Program, participating organizations gain early access to production-ready innovation while collaborating directly with Surveil's product organization to influence how emerging capabilities evolve to address real-world enterprise requirements.

Organizations participating in the Surveil Early Access Program gain:

- Early access to emerging platform capabilities
- Direct collaboration with Surveil product leadership and engineering teams
- Structured feedback opportunities that influence product direction
- Earlier operational experience managing AI economics at enterprise scale
- A faster path to value as new innovations become available

"The most valuable products are built alongside the organizations solving these challenges every day," said Per Skanne, Chief Product Officer at Surveil. "Our Early Access Program creates a direct connection between enterprise operators and our product teams, allowing customers, partners, and prospective organizations to gain practical experience while helping shape the capabilities they need next. That continuous feedback loop, powered by real-world operational data and real-world outcomes, has become a core part of how we innovate and deliver value."

Surveil's leadership in AI financial accountability is built on the same foundation that enables enterprises to manage cloud, SaaS, and AI investments at scale: trusted data, intelligent allocation, financial governance, operational context, and continuous collaboration with the practitioner community. As AI spending continues to expand, Surveil remains focused on enabling organizations to move beyond fragmented reporting toward continuous financial control, smarter technology investment decisions, measurable business value, and improved business performance across cloud, SaaS, and AI environments.

###

About Surveil

Surveil is a FinOps Certified Platform built for enterprise scale across Microsoft, AWS, multi-cloud, SaaS, and AI environments. By unifying financial and operational intelligence, Surveil transforms fragmented reporting into continuous financial control. Purpose-built for speed, scalability, and precision, Surveil delivers intelligent allocation, forecasting, optimization, governance, and AI financial accountability capabilities that help organizations improve operational efficiency, strengthen financial control, and make smarter technology investment decisions. Trusted by global enterprises and channel partners, Surveil empowers FinOps, IT, finance, engineering, and AI operations teams with the business context needed to manage modern cloud, SaaS, and AI economics. The company is ISO 27001, ISO 42001, ISO 27701, and SOC 2 Type II certified, with operations across North America, the UK, EMEA, and APAC. For more information, visit <https://surveil.co/>.
