

Artemis Labs Launches WP Rank, an AI SEO Engine That Finds, Writes, and Publishes Content Inside WordPress

New WordPress tool turns keyword research into published, search-optimized articles on autopilot, without leaving the dashboard

NEW YORK, NY, UNITED STATES, June 8, 2026 /EINPresswire.com/ -- Artemis Labs Pte. Ltd. today announced the launch of [WP Rank](#), an [AI-powered SEO tool that runs inside WordPress](#) and takes a site from keyword research to published, optimized articles automatically.

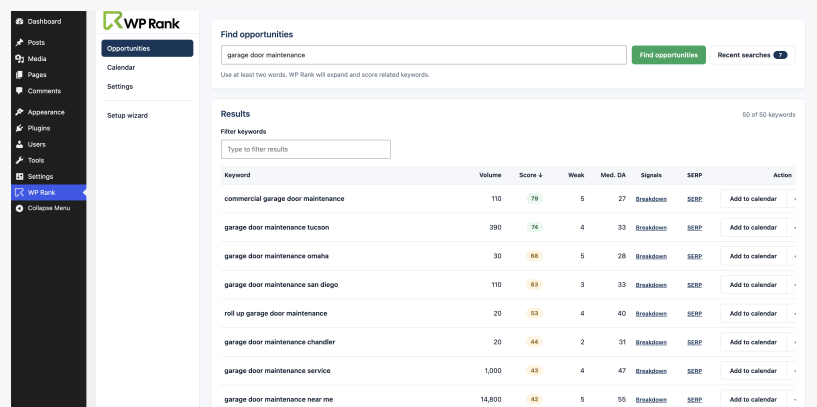

Most SEO tools do one half of the job. Keyword tools hand site owners a list of terms. AI writers produce drafts. The slow, expensive part, turning research into finished content that is structured, optimized, and actually published, still lands on the person running the site. WP Rank was built to close that gap.

WP Rank finds the keywords a site can realistically rank for by scoring each opportunity on winnability, using live search results and the strength of the sites already ranking, so users target the gaps instead of the giants. It then writes a full article informed by what is already ranking for that term, and applies on-page SEO without manual cleanup: structured data, an FAQ section, a table of contents, internal links to existing posts, and images with alt text.

Finished posts can be scheduled and published to WordPress automatically, one per day, on a content calendar that runs in the background. The tool also supports different target markets and content languages, so a site can research one country's search results while publishing in

WP Rank (wprank.io) by Artemis Labs

WP Rank WordPress plugin inside the WordPress dashboard

the right regional English or another language.

Everything happens inside the WordPress dashboard the user already works in. There is no separate platform to learn, and WP Rank can run alongside existing SEO plugins.

WP Rank is currently sold as a [one-time lifetime purchase](#) rather than a subscription for launch.
