

Ascendix Brings AI to AscendixRE CRM with New AscendixRE AI Suite

Ascendix Technologies unveils AscendixRE AI Suite, a new AI add-on for AscendixRE CRM that helps brokers with data entry, CRM search and document production.

DALLAS, TX, UNITED STATES, June 10, 2026 /EINPresswire.com/ --

Commercial real estate brokers have long operated with a split between two tools that don't connect. Generic AI assistants have no access to a firm's clients, deals or pipeline. The CRM holds years of relationship data but requires manual effort to update and specialized knowledge to query. AscendixRE AI Suite closes both gaps inside the platform brokers already use.

Four Modules, One Platform

The screenshot displays an email interface with an 'Inbox' header. The email is from Kevin Carter and contains text about property availability at '1000 Main Street in Chicago' and a client named 'HealthPlus Clinic'. An 'AI EXTRACTING' module is shown as a blue box with a double arrow icon, connected by lines to the email text and a form in the background. The form, titled 'AscendixRE CRM Update Existing Property', has three fields: 'Address' (1000 Main Street), 'Company' (HealthPlus Clinic), and 'Property type' (Medical Office). Each field has a checkmark icon to its left. At the bottom of the form are 'Edit Fields' and 'Approve All' buttons. Below the screenshot, the text 'Harvest for email and document parsing' is displayed.

[AscendixRE AI Suite adds](#) four AI-powered modules directly inside an existing AscendixRE org, with no new platform, no separate login and no data migration required.

- AscendixRE Connector gives brokers access to their CRM data inside ChatGPT and Claude. Instead of switching between applications, brokers can search pipeline, pull up client details and make record updates from the AI conversation already open on their screen..
- Harvest automates data capture from email. Brokers forward a deal-related email or PDF to a personal AI address. Harvest extracts contacts, properties, lease terms and deal details, then queues draft CRM records for broker review. Nothing saves without approval.
- Agent lets brokers run AscendixRE in plain English by text or voice. Contacts, tours, deal stages and follow-up tasks can be created or updated from any device, at any point in the day. Every action runs through the org's existing validation rules and duplicate handling.

We're moving brokers from data entry to data review . The AI does the reading. The broker decides what gets saved."

Wesley D. Snow, founder and CEO of Ascendix Technologies

- Composer AI connects branded CRE document templates to live AscendixRE records. BOVs, comp reports, tour books and listing activity reports generate directly from current CRM data, no manual assembly required.

Broker-Led, AI-Enabled

AscendixRE AI Suite never acts on its own. Every extraction and document originates upon broker's instruction. The AI handles the reading. The broker decides what gets saved.

[AscendixRE AI Suite is available now](#) as a paid add-on to AscendixRE. AscendixRE subscribers can contact their account manager to add the suite. If you would like to learn more about the new add-on, [talk to our team](#).
