

Larry's Gutters Brings Seamless Gutter Installation to High Springs, FL

High Springs Historic Homes Get Custom Seamless Gutters Built for Florida's Active Hurricane and Rainy Season

HIGH SPRINGS, FL, UNITED STATES, June 22, 2026 /EINPresswire.com/ -- Larry's Gutters, a North Central Florida gutter contractor with more than 12 years of experience and over 1,000 homes served, has expanded its service area to include High Springs, FL. The announcement comes as Florida's summer rainy season and the Atlantic hurricane season enter their simultaneous peak — a convergence that draws attention to drainage vulnerabilities common in the community's historic residential housing stock.

Seamless Gutter Installation in High Springs, FL

High Springs is one of Alachua County's most historically significant residential communities. Properties along NW Main Street and the surrounding blocks include homes constructed as early as the 1900s and 1910s, many of which retain their original architectural character — including narrower fascia boards, non-standard soffit profiles, and in many cases, no rear elevation gutter coverage. These structural characteristics present installation considerations that differ substantially from post-1990 residential construction and require field-adjusted techniques during the gutter installation process.

High Springs and the surrounding northern Alachua County corridor regularly records some of the highest single-storm rainfall totals in the region, driven by slow-moving convective systems that interact with the Santa Fe River valley terrain. For properties where a [seamless gutter installation](#) is overdue or where the existing system is undersized for Florida's rainfall volume, that convergent storm window represents a measurable risk to fascia boards, foundation perimeters, and rear elevation soffits — particularly on older structures where drainage gaps have accumulated over decades.

The proximity of High Springs to the Ichetucknee Springs State Park and the Santa Fe River

corridor introduces an additional structural consideration: elevated water table levels on low-lying lots near the river drainage area. Unlike higher-elevation residential markets, saturated soil in this corridor has limited capacity to absorb additional water during sustained storm events. Downspout discharge routing — where water exits the gutter system and how far it is directed from the foundation perimeter — is a significant design factor on these properties. Larry's Gutters accounts for site-specific drainage conditions during the installation planning phase on every job.

"High Springs is a community where the houses have a lot of character, and that character comes with real installation considerations. Fascia widths on older homes can be narrower, the rooflines have more complexity, and in a lot of cases the rear elevations have never had gutters installed at all. Fabricating everything on-site means we can cut each run to the precise measurements of the roofline and match the trim color of the home — for a historic property, that approach makes a visible difference in the finished result."

— said a representative of Larry's Gutters

The company's installation process uses K-Style aluminum fabricated on-site at each property, with each run cut to the exact measurements of the roofline. Six-inch gutters are the standard specification on every project. Valley shields are positioned at roof valley intersections as a standard component of the installation scope.

Larry's Gutters serves High Springs as part of its Gainesville-area service territory, which also includes Gainesville, Newberry, Alachua, Micanopy, Waldo, Williston, Hawthorne, Archer, and surrounding Alachua and Levy County communities. The company is BBB-accredited, a member of the Rain Gutter Association, and backs every installation with a Lifetime Workmanship Guarantee.

More information about seamless gutter installation in High Springs FL is available on the company's website.

Homeowners across the region can visit the Larry's Gutters Gainesville service page for information on coverage areas and installation options throughout North Central Florida.

About Larry's Gutters

Larry's Gutters is a Central Florida gutter contractor with over 12 years of experience and more than 1,000 homes served across Alachua, Lake, Sumter, and Marion counties. The company specializes in seamless K-Style aluminum gutter installation, gutter guard systems, and gutter repair services for residential and commercial properties. Larry's Gutters is BBB-accredited, an RGA member, and backs every installation with a Lifetime Workmanship Guarantee. Service locations include Gainesville and Leesburg, FL.
