

TuxCare Releases Endless Lifecycle Support for Debian 11

PALO ALTO, CA, UNITED STATES, June 10, 2026 /EINPresswire.com/ -- [TuxCare](#), a global innovator in securing open source, today announced general availability of its [Endless Lifecycle Support \(ELS\) services for Debian 11](#) that is scheduled to no longer be supported through Debian's Long Term Support team as of August 31, 2026.

Debian 11, codenamed "Bullseye," was released in 2021 and remains a popular operating system, serving as the foundation for countless business-critical workloads worldwide. Known for its stability and reliability, it's the upstream source for many other popular Linux distributions and software platforms, making it a pillar of IT infrastructure.

As organizations increasingly prioritize continuity and risk reduction, many continue running Debian 11 in production environments long after official support ends. Upgrading mission-critical systems, however, can be a lengthy and complex undertaking involving application validation, dependency testing, regulatory considerations, and infrastructure planning.

TuxCare's ELS for Debian 11 helps organizations bridge that gap by delivering ongoing security patches for vulnerabilities discovered after Debian 11 reaches end of life, enabling businesses to maintain secure operations while upgrading on their own timelines.
