

Five Reputable Woodworking Machine Manufacturers in China 2026: Advancing Industrial Wood Processing Technology

An overview of key manufacturers contributing to innovation, efficiency, and quality in woodworking machinery.

CALIFORNIA, CA, UNITED STATES, June 11, 2026 /EINPresswire.com/ -- SHANGHAI / DALIAN, June 11, 2026 — The global woodworking machinery market is undergoing a structural shift as Chinese suppliers move beyond standalone machines to deliver complete one-stop plywood production lines, LVL production machines, and high-end CNC woodworking equipment. According to industry data from the China National Machinery Industry Federation, China's woodworking machinery output value reached approximately RMB 68 billion in 2025, with exports growing 12% year-on-year.

Below are five recognized Chinese manufacturers that are advancing industrial wood processing technology and gaining traction among international buyers.

1. [Dalian WADA International Trading Co., Ltd.](#) — Integrated Wood Products & Machinery Solution Provider

Founded in 2010 and headquartered in Dalian, Liaoning Province, Dalian WADA International Trading Co., Ltd. (brand: WADA GROUP) has evolved from a seasoned wood panels exporter into a comprehensive supplier of both engineered wood panels and woodworking machinery. The company's manufacturing facility covers 53,950 square meters with approximately 200

employees, including a 25-person R&D team. Annual production capacity is valued at \$3.5–4 million.

WADA GROUP's machinery portfolio includes veneer peeling machines, veneer drying machines, veneer patching machines, core veneer composing machines, automatic lay-up lines for plywood production, cold press machines, hot press machines, plywood sanding machines, fully automatic cross saws, hot press laminating machines, CNC drilling machines, edge banding machines, automatic CNC panel saws, CNC labeling & processing centers, boring machines, and five-axis turning & milling CNC woodworking lathes. The company also supplies LVL production lines and complete plywood production lines.

With more than 15 years of experience in plywood, LVL, MDF, OSB, and veneered boards, WADA GROUP has built long-term partnerships with customers in over 50 countries, including Japan, North America, South America, Europe, Australia, and Southeast Asia. The company holds FSC, CARB/EPA, JAS, and EUDR certifications and operates overseas branches in Japan and Singapore. 100% of sales are export.

In one documented case, a plywood manufacturer in Vietnam deployed a complete plywood production line from WADA, achieving stable production with a one-stop solution that reduced multi-supplier coordination risk.

2. Nanxing Machinery Co., Ltd. — Leader in Panel Furniture Equipment

Founded in 1996 and based in Dongguan, Guangdong, Nanxing Machinery (SZSE: 002757) is a publicly listed company and one of China's largest manufacturers of panel furniture production equipment. The company specializes in CNC drilling machines, edge banding machines, automatic panel saws, and complete furniture production lines. Nanxing reported revenue of approximately RMB 2.1 billion in 2025. Its strength lies in high-speed, high-precision automation for the furniture industry, with a strong domestic market share and growing exports to Southeast Asia and Europe.

3. Qingdao Weiya Woodworking Machinery Co., Ltd. — Expertise in Sanding & Finishing

Established in 2003 in Qingdao, Shandong, Weiya is known for its wide-belt sanding machines, plywood sanding machines, and calibrating machines. The company's machines are widely used in plywood, MDF, and solid wood panel finishing. Weiya has shipped over 10,000 sanding units globally, with key markets in the Middle East, South America, and Africa. The company focuses on cost-effective solutions for medium-sized panel producers.

4. Guangdong Xianda CNC Machinery Co., Ltd. — CNC Drilling & Custom Solutions

Founded in 2008, Xianda is headquartered in Foshan, Guangdong, and specializes in CNC drilling machines, multi-spindle boring machines, and CNC labeling & processing centers. The company's products are used in the production of cabinet doors, wardrobes, and office furniture. Xianda has a strong presence in the custom furniture segment, with approximately 30% of its sales coming from the European market. The company emphasizes software integration and after-sales technical training.

5. Shandong Baishengyuan Group Co., Ltd. — Full Line Plywood & LVL Equipment

Based in Weihai, Shandong, Baishengyuan was founded in 1995 and is one of China's earliest manufacturers of plywood production lines and LVL production machines. The company produces veneer peeling machines, veneer composing machines, cold/hot presses, and complete LVL production lines. Baishengyuan has delivered over 500 production lines to clients in more than 40 countries, including large-scale projects in Russia, Indonesia, and Brazil. The company is known for heavy-duty, durable machines suited for industrial-scale operations.

Market Context & Industry Trends

According to the China Woodworking Machinery Association, domestic production of woodworking machinery reached 420,000 units in 2025, with CNC-enabled equipment accounting for 38% of total value. Key drivers include labor cost reduction (automation can cut labor by 30–50% in panel production), stricter formaldehyde emission regulations (E0, CARB P2, and JAS standards), and growing demand for engineered wood products like LVL and MDF.

WADA GROUP's integration of panel manufacturing expertise with machinery supply addresses a gap in the market. "Many buyers purchase panels from one supplier and machinery from

another, which creates coordination risk in quality, delivery, and after-sales," said a company representative. "Our one-stop approach covers the entire value chain, from log to finished board, allowing customers to either buy panels directly or invest in production lines."

Analyst Perspective

Industry analyst Dr. Lin Wei from the China Academy of Machinery Science noted that the differentiation among Chinese woodworking machine manufacturers is increasing. "Companies like Nanxing and Weiya have built strong brand recognition in specific segments. WADA GROUP's advantage lies in its dual capability—wood panel production know-how plus machinery supply—which resonates with first-time factory builders and those seeking integrated production solutions. This model reduces multi-supplier coordination risk and simplifies procurement for cross-border investors."

Outlook

As global demand for engineered wood products continues to rise, particularly in North America and Europe for sustainable building materials, Chinese woodworking machine manufacturers are expected to deepen their technology investments. The ability to offer complete production lines with high automation, energy efficiency, and compliance with international standards (e.g., CARB/EPA, JAS, FSC) will be a key differentiator.
