

MICROSEISMIC LAUNCH CLAROS, A NEW REAL-TIME COMPLETIONS PORTAL

HOUSTON, TX, UNITED STATES, June 22, 2026 /EINPresswire.com/ --

[MicroSeismic](#), Inc. (MSI) today announced the launch of [Claros](#)™, a new secure client portal that gives operators on-demand access to their microseismic monitoring data in one place. Replacing the wait for traditional data exports, Claros lets clients log in to view their projects, check the health of their array(s), and set alerts that matter most for their teams, anytime, anywhere.

“For more than 20 years, MicroSeismic has helped operators understand what is happening beneath their wells,” said Dr. Peter M. Duncan, CEO and Founder of MicroSeismic. “With Claros, we are putting that insight directly into our clients’ hands – secure, organized, and available the moment they need it. This is a new era in how our clients’ access and act on their monitoring data.”

“

With Claros, we are putting that insight directly into our clients’ hands – secure and organized. This is a new era in how our clients’ access and act on their monitoring data”

Dr. Peter Duncan

Claros gives each client a single, secure home for their monitoring program. Core capabilities include on-demand access to monitoring data, array health and diagnostics at a glance, customizable alerts, and an open API with webhooks that let clients connect Claros to the systems they already use. The result is monitoring information that

is easier to find, share, and act on across an operator’s entire team.

Claros will make its public debut at the Unconventional Resources Technology Conference ([URTeC](#)) 2026, taking place June 22-24 at the George R. Brown Convention Center in Houston. Attendees can see the portal firsthand at MicroSeismic Booth #738.
