

Orbit Securities Newly Appointed CFA Vincent Mwakatobe to Launch Intelligent Funds and Capital Market Initiatives

As the Dar es Salaam Stock Exchange marks 30 years, a veteran financier returns to introduce quantitative investing and investor education.

DAR ES SALAAM, DODOMA , TANZANIA, June 19, 2026 /EINPresswire.com/ -- As the Dar es Salaam Stock Exchange (DSE) approaches its landmark 30th anniversary, the Tanzanian financial sector is preparing for a technological and institutional shift. [Vincent](#)

[Mwakatobe](#), a veteran financial strategist with over three decades of experience in global financial hubs has returned to Tanzania to assume the role of Chief Financial Analyst at Orbit Securities. His return is set to accelerate the integration of global quantitative methodologies within the local capital market, driven by the launch of newly structured intelligent investment funds and a nationwide investor education framework.

This transition occurs at a pivotal moment for the regional financial landscape. By combining established international methodologies with local market opportunities, the appointment aims to bridge the gap between emerging markets and advanced global investment ecosystems. It signals an effort to transition local trading activities from speculative behaviours to systematic, technology-backed investment practices.

Professional Trajectory and Educational Foundation

Mr Mwakatobe's academic and professional background reflects a consistent adherence to rigorous global financial standards. He studied Economics and Management at the University of Oxford with a focus on financial economics, followed by postgraduate training in financial engineering and global capital markets at the London School of Economics and Political Science. He later completed executive programmes in advanced financial strategy and asset management, alongside specialised research in investment management and quantitative capital markets at leading international business schools, and holds the Chartered Financial Analyst (CFA) credential.

His career began in the City of London in 1992 as a financial research analyst, where he focused on equity research, valuation modelling, and corporate analysis across European banking, energy, and utilities sectors. Over the following decades, he progressed into senior roles in global asset allocation and investment strategy, overseeing the development of quantitative models, advising institutional and sovereign clients, and contributing to the management of large, diversified portfolios across developed and emerging markets. From 2019 to 2024, he served as a senior strategic advisor to an international investment holding company in the United States, building cross-border research networks linking the UK, the US, and East Africa and deepening his focus on the Tanzanian and wider East African capital markets.

Introduction of Intelligent Funds and Algorithmic Models

At the core of Mr Mwakatobe's new mandate at Orbit Securities is a strategic partnership with Vincent Durnwick Capital Limited, an international equity investment and quantitative research institution he founded in the United Kingdom. Through this joint venture, Orbit Securities is introducing advanced algorithmic trading frameworks and bank-grade risk management systems to the Tanzanian market. This collaboration marks the deployment of intelligent quantitative analysis designed specifically for emerging market dynamics.

A key initiative of this partnership is the launch of specialised, technology-driven investment vehicles. These intelligent funds—including the Vincent Wealth Multiplier Fund, the DSE Growth Index Fund, and the FEST Growth Index Fund—aim to offer diversified, systematically managed exposure to regional equities. Alongside sector-specific vehicles such as the East Africa Agriculture Fund, these products utilise quantitative screening and automated risk-mitigation protocols to optimise capital allocation. By transitioning the analytical focus from traditional manual evaluations to hybrid models that merge human expertise with advanced data processing, the firm intends to improve trading efficiency and liquidity on the DSE.

The [DSE Investor Education Programme](#)

To support the introduction of these complex financial products, Mr Mwakatobe, supported by Rebecca Mponzi, Senior Investment Advisory Assistant at Orbit Securities, is launching the 'DSE Investor Education Programme'. Ms Mponzi, an alumna of the University of Dar es Salaam, the University of Warwick, and the London Business School, brings extensive regional research experience, having analysed over one hundred listed entities across East Africa.

The educational initiative is structured to equip retail investors, local corporate entities, and aspiring market analysts with foundational knowledge in [fundamental analysis, quantitative methods, and risk management](#). Rather than reacting to short-term market volatility, participants will be trained to evaluate corporate balance sheets and understand the mechanics of structured funds. By establishing standardised training protocols, the programme seeks to lower barriers to entry for domestic participants while fostering an environment that appeals to sophisticated foreign institutional allocators.

Institutional Development and Capital Integration

The transition from the high-velocity environments of London and New York to the East African financial sector represents a deliberate shift in strategy. Under Mr Mwakatobe's leadership, Orbit Securities is establishing a proprietary research division dedicated to producing consistent, institutional-grade market intelligence. This unit will focus on long-term value creation, advising domestic enterprises on optimised capital structures, strategic block trades, and structured placements to attract stable, long-term capital.

By modernising local research practices and offering educational resources, the initiative aligns with the broader regulatory objectives of the Capital Markets and Securities Authority (CMSA) and the Bank of Tanzania (BOT) to enhance transparency, governance, and market depth. This institutionalisation is intended to help position the DSE as a more competitive destination for international capital and to support sustainable economic growth across the wider East African region.

About Vincent Mwakatobe

Vincent Mwakatobe is a global financial strategist and quantitative research specialist with over thirty years of experience in international capital markets. A Chartered Financial Analyst (CFA), he holds academic credentials from the University of Oxford and the London School of Economics, with executive education from Harvard Business School and The Wharton School. Over his career, he has held senior leadership roles at major global financial institutions. He is the founder of Vincent Durnwick Capital Limited in the United Kingdom and currently serves as the Chief Financial Analyst at Orbit Securities Limited in Tanzania, where he focuses on deploying intelligent quantitative investment models, structuring intelligent index funds, and expanding capital market literacy across East Africa.
