

Ontario Community Health Centre Upgrades from Sage 300 to Business Central with Dynamics Square Canada

Ontario healthcare organization adopts D365 Business Central to overcome Sage 300 limitations and improve financial controls, reporting, approvals & efficiency

TORONTO, ONTARIO, CANADA, June 19, 2026 /EINPresswire.com/ -- An Ontario-based Community Health Centre has transformed its financial operations after completing a [Sage 300 to Business Central migration](#) with Dynamics Square CA. The project helped the non-profit modernize legacy financial processes, strengthen operational visibility, and improve collaboration across its health service locations throughout Ontario. The case study draws on a real [Dynamics Square Canada](#) customer engagement with a Community Health Centre operating multiple locations across Ontario.

Healthcare organizations are under more pressure than ever to prove accountability, compliance, and financial transparency, and that pressure is forcing a harder look at the ERP systems many have relied on for years. Those systems often weren't built for what's being asked of them today. For this Community Health Centre, the strain showed up in familiar ways. Approvals dragged. Reports took longer than they should have. Financial accuracy slipped, and supporting staff spread across different sites got harder by the year.

To fix that, the organization brought in Dynamics Square Canada to implement [Dynamics 365 Business Central](#), Microsoft's cloud-based business management platform. The rollout covered core Business Central modules for finance management, purchasing, sales, and fixed assets, and connected cleanly into the organization's existing Microsoft 365 environment.

The result is a single, unified platform. Financial workflows are streamlined, approvals move faster, and staff across multiple healthcare facilities have far easier access to the system. The organization now has a modern ERP foundation built for future growth, with much less reliance

Healthcare organizations require accurate financial data, efficient approvals, and real-time visibility to support critical community services,"

D365 Solution Architect at
Dynamics Square Canada*

on disconnected systems and manual processes. Business Central's cloud architecture and its tight integration with the Microsoft ecosystem are commonly cited as reasons organizations leave legacy platforms like this behind.

"This Sage 300 to Business Central Migration demonstrates how modern ERP technology can help non-profit organizations simplify operations, improve financial governance, and create a more connected experience for users across multiple locations."□

It's part of a broader shift happening across Canada, where

organizations are walking away from aging ERP systems in favor of cloud-based solutions that scale better, flex more, and integrate with the tools teams already use day to day. As more businesses and non-profits across Canada make that move, Dynamics 365 Business Central keeps coming up as the platform they land on when modernizing how they manage finances and operations.

Dynamics Square Canada specializes in Business Central implementation, ERP modernization, cloud migration, and digital transformation for organizations across Ontario and Canada. Its consulting, implementation, and support services are built around helping businesses and non-profits get real, lasting value out of their Microsoft business applications, not just getting the software up and running.

Organizations weighing a Sage to Business Central migration or simply trying to figure out whether Dynamics 365 Business Central fits their ERP modernization plans, can reach out to Dynamics Square Canada for a personalized assessment and migration roadmap.

About Dynamics Square Canada

Dynamics Square Canada is a Microsoft Solutions Partner specializing in Dynamics 365 Business Central, along with ERP implementation, migration, upgrades, support, and digital transformation consulting. The company works with organizations across Ontario and Canada to streamline operations, sharpen financial visibility, and accelerate growth through Microsoft business technologies.
