

Aero Grove by Xinyun Li Wins Silver in A' Design Award for Architecture

*Boston Community Cultural Center
Recognized for Humble Integration into
Urban Public Green Space*

COMO, CO, ITALY, June 22, 2026

/EINPresswire.com/ -- The A' Design Award has announced Aero Grove by [Xinyun Li](#) as a Silver winner in the [Architecture](#), Building and Structure Design category. Aero Grove is a community cultural center situated within a public green space in Boston, recognized for its thoughtful approach to integrating large architecture into an established urban setting. The A' Design Award is one of the world's most respected and well-recognized accolades in the field of architecture and design, evaluating entries through a rigorous and impartial process. This Silver A' Design Award acknowledges

the work as an outstanding example of considered, user-centered design. The recognition places Aero Grove among a distinguished group of projects celebrated for excellence and innovation.

Aero Grove

The A' Architecture, Building and Structure Design Award holds relevance for architects, communities, and stakeholders who seek designs that respond responsibly to their surroundings. Aero Grove reflects a growing emphasis within the architecture industry on preserving public freedom while introducing cultural and educational value. By prioritizing the original function of the site and the needs of its users, the project aligns with contemporary standards in community-focused and context-sensitive design. Its blend of exhibition, immersive experience, and gathering spaces offers practical benefits to residents, cultural organizations, and the wider city. The work demonstrates how new architecture can enhance rather than overwhelm a cherished public environment.

Aero Grove explores how a large structure can humbly integrate into the urban fabric while creating an inviting, active green space. Its fluid, circular form and undulating ramps naturally connect people, architecture, and nature, ensuring open access and encouraging community use. A central courtyard, rooftop paths, and layered facades allow the building to blend into the cityscape, while the second-level platform fosters dialogue and practice. The facade becomes a canvas for daylight and shadow, offering experiences that range from expansive city views to intimate courtyard moments. Constructed with GFRC, ultra clear laminated Low-E glass, travertine and marble tile, and pebble pavement, the design balances material refinement with environmental awareness.

The Silver A' Design Award recognition may serve as motivation for Xinyun Li to continue exploring how architecture can act as a medium of expression and community connection. The acknowledgment highlights the value of design that respects existing public spaces while introducing new moments of interaction. Such recognition can inform future projects that prioritize cultural sensitivity, spatial harmony, and the relationship between people, technology, and the urban environment. The achievement encourages continued innovation in context-driven architectural practice.

Interested parties may learn more about the award-winning design at the dedicated page on the A' Design Award website, where additional details about the project and its designer are available.

About Xinyun Li

Xinyun Li is a New York based registered architect and multidisciplinary designer working at the intersection of architecture, technology, and cultural narrative. She holds a Master of Architecture from the Harvard Graduate School of Design and has worked professionally at Perkins Eastman, KPF, and Laguarda.Low Architects. Her experience spans large-scale mixed-use districts, office towers, institutional environments, residential development studies, and human-centered healthcare spaces, with a focus on design quality, feasibility, and user experience. Alongside professional practice, Xinyun develops conceptual and research-driven work exploring how architecture can be a medium of expression, and she is based in the United States of America.

About the Silver A' Design Award Recognition

The Silver A' Design Award recognizes designs that demonstrate excellence, innovation, and a strong command of both function and aesthetics. In the Architecture, Building and Structure Design category, entries are assessed against criteria including innovative use of space, structural integrity, aesthetic appeal, environmental impact, functional efficiency, material selection, and technological integration. Further considerations include social relevance, cultural sensitivity, economic viability, design originality, user comfort, energy efficiency, and adaptability to change. Evaluation also accounts for use of natural light, spatial harmony, safety measures, accessibility, resilience to weather, and integration with surroundings. Recipients are

acknowledged for raising industry standards and contributing meaningfully to the advancement of architectural practice.

About A' Design Award

The A' Architecture, Building and Structure Design Award is a highly regarded competition that welcomes a wide range of participants, including architects, engineering firms, construction companies, and established brands within the architecture and design industries. Entries are blind peer-reviewed and assessed by a world-class jury panel of design professionals, architecture industry experts, journalists, and academics, using pre-established evaluation criteria. Organized since 2008 and now in its 18th year, the A' Design Award is an international, juried competition open to entries from all countries and across all industries. The ultimate aim of the A' Design Award is to recognize and promote superior projects that advance and benefit society, driven by a philanthropic mission to help create a better world through the power of good design.
