

Computerized Maintenance Management System Market Forecast Report Featuring Segment Analysis & Strategic Industry Insight

The Business Research Company's Computerized Maintenance Management System Market Report 2026 – Market Size, Trends, And Global Forecast 2026-2035

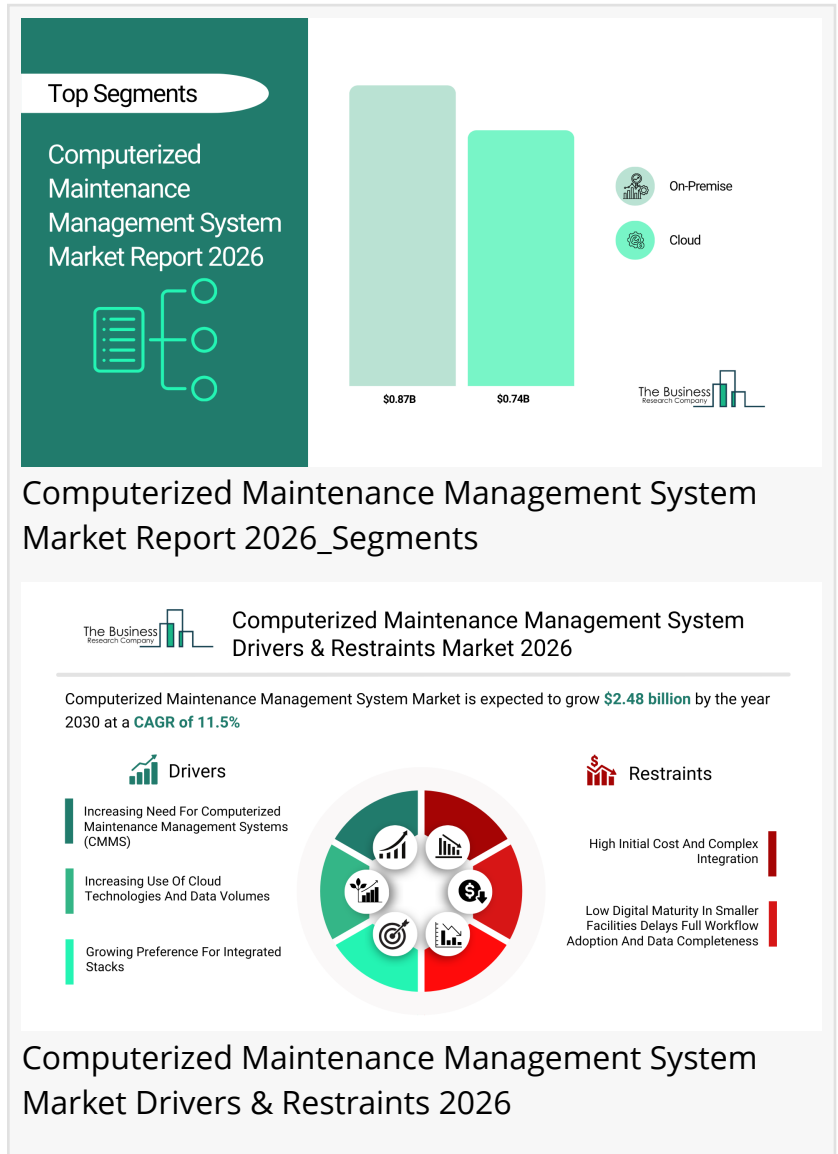

LONDON, GREATER LONDON, UNITED KINGDOM, June 22, 2026

/EINPresswire.com/ -- "[Computerized Maintenance Management System market](#) to surpass \$2 billion in 2030. In comparison, the Business Analytics & Enterprise Software market, which is considered as its parent market, is expected to be approximately \$1,243 billion by 2030, with Computerized Maintenance Management System to represent around 0.2% of the parent market. Within the broader Information Technology industry, which is expected to be \$13,788 billion by 2030, the Computerized Maintenance Management System market is estimated to account for nearly 0.02% of the total market value.

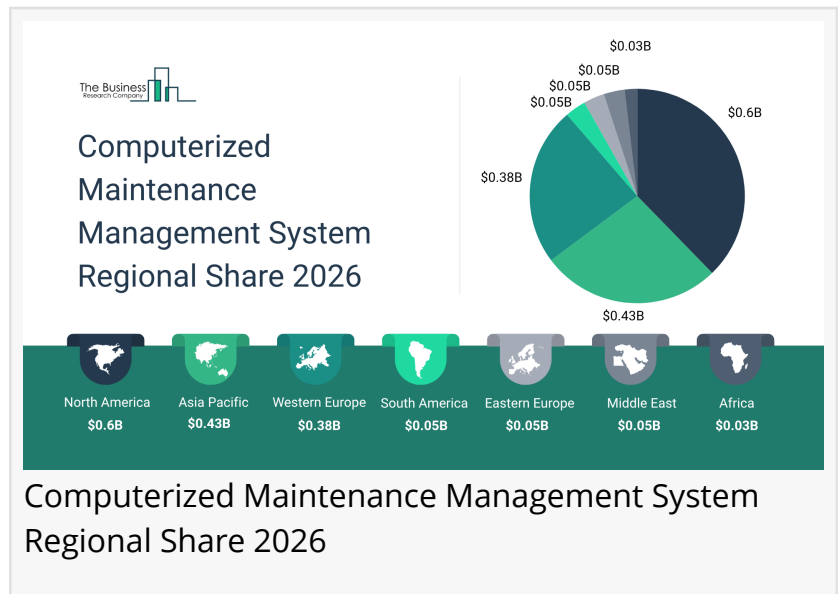

Which Will Be The Biggest Region In

The Computerized Maintenance Management System Market In 2030?

North America will be the largest region in the computerized maintenance management system market in 2030, valued at \$0.88 billion. The market is expected to grow from \$0.55 billion in 2025 at a compound annual growth rate (CAGR) of 10%. The rapid growth can be attributed to increasing adoption of predictive maintenance strategies across industrial sectors, rising focus on minimizing equipment downtime and asset failure, strong presence of advanced

manufacturing and facility management industries, growing integration of IoT-enabled asset monitoring systems, increasing investments in cloud-based enterprise maintenance platforms, and high demand for workforce efficiency and real-time maintenance scheduling solutions across the United States and Canada.

Which Will Be The Largest Country In The [Global Computerized Maintenance Management System Market](https://www.thebusinessresearchcompany.com/sample_request?id=9856&type=smp&utm_source=EINPresswire&utm_medium=Paid&utm_campaign=Jun_PR) In 2030?

The USA will be the largest country in the computerized maintenance management system market in 2030, valued at \$0.78 billion. The market is expected to grow from \$0.49 billion in 2025 at a compound annual growth rate (CAGR) of 10%. The strong growth can be attributed to rising demand for centralized maintenance data management across large enterprises, increasing adoption of mobile-enabled maintenance applications by field technicians, growing emphasis on extending equipment lifecycle and operational reliability, expansion of smart factories and digitally connected industrial facilities, increasing use of analytics-driven maintenance planning tools, and continuous investments in enterprise asset optimization technologies across the country.

What Will Be The Largest Segment In The Computerized Maintenance Management System Market In 2030?

The computerized maintenance management system market is segmented by deployment type into cloud, and on-premise. The on-premise market will be the largest segment of the computerized maintenance management system market segmented by deployment type, accounting for 54% or \$1 billion of the total in 2030. The on-premise market will be supported by the increasing preference for in-house control over maintenance and operational data, rising demand for enhanced system customization and integration capabilities, strong adoption among large enterprises with complex asset management requirements, growing concerns regarding data privacy and cybersecurity compliance, expansion of industrial facilities requiring dedicated maintenance infrastructure, and higher reliability and performance for mission-critical maintenance operations.

The computerized maintenance management system market is segmented by enterprise size into large enterprises, and small and medium enterprises (SMEs).

The computerized maintenance management system market is segmented by application into asset management, work order management, inventory management, preventive maintenance, and other applications.

The computerized maintenance management system market is segmented by end-use into manufacturing, facility management, healthcare, education, government, and other end uses.

What Is The Expected CAGR For The Computerized Maintenance Management System Market Leading Up To 2030?

The expected CAGR for the computerized maintenance management system market leading up to 2030 is 12%.

What Will Be The Growth Driving Factors In The Global Computerized Maintenance Management System Market In The Forecast Period?

The rapid growth of the global computerized maintenance management system market leading up to 2030 will be driven by the following key factors that are expected to accelerate adoption of computerized maintenance management systems for asset and maintenance optimization, strengthen utilization of cloud-based maintenance platforms and data-driven analytics capabilities, and increase enterprise preference for integrated digital maintenance ecosystems connected with ERP, inventory, and operational management systems.

Increasing Need For Computerized Maintenance Management Systems (CMMS) - The increasing need for computerized maintenance management systems (CMMS) is expected to become a key growth driver for the computerized maintenance management system market by 2030. The increasing need for computerized maintenance management systems (CMMS) is a major driver of the computerized maintenance management system market because organizations are focusing on improving asset reliability and reducing operational downtime. Industries such as manufacturing, transportation, energy, and healthcare depend heavily on equipment performance, making maintenance management a critical business function. CMMS platforms help companies automate maintenance scheduling, track asset conditions, and manage work orders more efficiently. This improves equipment lifespan while minimizing unexpected breakdowns and repair expenses. Businesses are also adopting CMMS solutions to strengthen workforce productivity and streamline maintenance operations across multiple facilities. In addition, rising awareness regarding preventive and predictive maintenance strategies is accelerating demand for digital maintenance tools. As companies continue prioritizing operational efficiency and cost optimization, the adoption of CMMS solutions is expected to grow steadily across industries. As a result, the increasing need for computerized maintenance management systems (CMMS) is anticipated to contribute to 2.1% annual growth in the market.

Increasing Use Of Cloud Technologies And Data Volumes - The increasing use of cloud technologies and data volumes is expected to emerge as a major factor driving the expansion of the computerized maintenance management system market by 2030. The increasing use of

cloud technologies and rising data volumes is driving the computerized maintenance management system market by enabling organizations to manage maintenance activities with greater flexibility and scalability. Cloud-based CMMS platforms allow businesses to access maintenance information remotely, improving coordination between maintenance teams, managers, and field technicians. The growing amount of operational and machine-generated data also supports advanced analytics and real-time monitoring capabilities within CMMS systems. These solutions help organizations identify equipment issues faster and make data-driven maintenance decisions that reduce downtime and operational risks. Cloud deployment further lowers infrastructure costs and simplifies software updates, making CMMS adoption more affordable for small and medium-sized enterprises. Additionally, integration with IoT devices and smart sensors enhances predictive maintenance capabilities and asset visibility. As industries continue embracing digital transformation and connected technologies, cloud-enabled CMMS demand is expected to increase significantly. Consequently, the increasing use of cloud technologies and data volumes is projected to contribute to around 2.0% annual growth in the market.

Growing Preference For Integrated Stacks - The growing preference for integrated stacks is expected to act as a key growth catalyst for the computerized maintenance management system market by 2030. The growing preference for integrated stacks is acting as a key driver for the computerized maintenance management system market because organizations increasingly seek unified platforms that connect maintenance operations with broader enterprise functions. Businesses are integrating CMMS solutions with enterprise resource planning (ERP), inventory management, procurement, and asset management systems to improve operational visibility and coordination. This integration eliminates data silos and enables smoother communication across departments, resulting in faster decision-making and better resource utilization. Integrated technology stacks also help organizations automate workflows, optimize spare parts inventory, and improve compliance reporting. Companies prefer centralized systems that can manage maintenance, finance, operations, and analytics from a single platform, enhancing efficiency and reducing administrative complexity. Furthermore, integrated CMMS solutions support real-time data sharing and predictive insights that strengthen maintenance planning strategies. As enterprises continue investing in connected digital ecosystems, demand for integrated CMMS platforms is expected to rise rapidly. Therefore, the growing preference for integrated stacks is projected to contribute to approximately 1.8% annual growth in the market.

What Are The Key Growth Opportunities In The Computerized Maintenance Management System Market In 2030?

The most significant growth opportunities are anticipated in the cloud market, and the on-premise market. Collectively, these segments are projected to contribute over \$1.5 billion in

market value by 2030, driven by increasing demand for automated work order management solutions, rising adoption of real-time asset performance tracking systems, growing focus on reducing maintenance costs and unplanned operational disruptions, expansion of digital maintenance ecosystems across industrial and commercial facilities, increasing implementation of condition-based maintenance strategies, and continuous advancements in enterprise maintenance software interoperability and scalability. This surge reflects the accelerating focus on improving asset utilization, enhancing maintenance productivity, and supporting data-driven operational decision-making, fuelling transformative growth within the broader industrial asset management industry.

The cloud market is projected to grow by \$0.5 billion, and the on-premise market by \$1 billion over the next five years from 2025 to 2030.

What's new in our 2026 market reports:

- Market attractiveness scoring and analysis
- Total addressable market (TAM) analysis
- Company scoring matrix graphics and tables
- Excel dashboards
- Market hotspots infographics
- Key technologies and future trends
- Updated graphics and tables

Learn More About [The Business Research Company](https://www.thebusinessresearchcompany.com)

The Business Research Company (www.thebusinessresearchcompany.com) is a leading market intelligence firm renowned for its expertise in company, market, and consumer research. We have published over 30,000+ reports across 27 industries and 60+ geographies. Our research is powered by 1,500,000 datasets, extensive secondary research, and exclusive insights from interviews with industry leaders.

We provide continuous and custom research services, offering a range of specialized packages tailored to your needs, including Market Entry Research Package, Competitor Tracking Package, Supplier & Distributor Package and much more.
