

# Rovensa Next Introduces ORO-5: Advanced Multi-Functional Adjuvant for Superior Spray Performance

*Rovensa Next launches ORO-5, a next-generation adjuvant that conditions hard water, reduces drift, and improves deposition — without lowering tank pH.*

FRESNO, CA, UNITED STATES, June 25, 2026 /EINPresswire.com/ -- [Rovensa](#)

[Next](#), a global leader in biosolutions, today announced the launch of [ORO-5](#), a next-generation adjuvant designed to improve spray performance by conditioning hard water and reducing drift — without lowering tank pH.

ORO-5 is formulated with a proprietary high molecular weight surfactant, sodium citrate salt, and humectant. It effectively binds mineral cations in hard water that can deactivate glyphosate and other sensitive pesticides. Additionally, ORO-5 reduces fine spray droplets to minimize drift and contains surfactants and humectants that promote uniform deposition on the target.

By combining water conditioning, drift reduction, and improved deposition in a single product — without lowering pH — ORO-5 offers growers and retailers a simple and effective solution for maximizing crop protection performance under real-world conditions.

Key benefits of ORO-5 include:

- Does not lower spray tank pH
- Binds cations responsible for hard water issues
- Reduces drift and improves deposition
- Performs well in low humidity conditions
- Compatible with [OROWET](#)® and MYRIAD® Technologies
- Flexible, low use rates suitable for ground and aerial applications

ORO-5 is available in 2.5-gallon bottles and 265-gallon totes.
