

XFun Releases Q2 2026 User Behavior Analysis on Changing Dating Preferences

As Q2 data shows a 34% drop in time-to-meet, younger adults are ditching heavy relationship scripts in favor of flexible, low-pressure "Wildflowering."

NY, UNITED STATES, June 29, 2026 /EINPresswire.com/ -- XFun, a global social discovery platform, has released its Q2 2026 internal user behavior analysis. The report examines anonymized platform data related to user preferences, meeting patterns, and relationship intentions among adults using the platform.

Casual Fun Replaces Rigid Dating Labels

According to the analysis, 68% of users who updated their "What Are You Looking For" preference after meeting someone in person selected a different relationship preference than the one originally chosen on the platform. The findings suggest that some users adjust their stated preferences after offline interactions.

The report also highlights several behavioral trends observed during Q2 2026:

- The average time between matching and meeting in person decreased by 34%.
- Conversations continuing beyond the first week after an in-person meeting increased by 29%.
- Selections for relationship preferences such as "[Casual Dating](#)" and "[Open Relationships](#)" continued to increase during the reporting period.

An [XFun data](#) strategy representative said the findings indicate that user preferences may evolve after in-person interactions.

"The data suggests that relationship intentions are not always fixed at the time users join the platform. In some cases, users modify their preferences after meeting someone offline, reflecting changes based on personal experience rather than initial expectations."

The company noted that the report is based on anonymized internal platform data collected during the second quarter of 2026.

User Perspectives

Ryan, 31, a user based in New York, said his approach to dating has become more flexible over time.

"I used to feel pressure to define exactly what I wanted before meeting someone. Now I prefer to meet first and decide afterward whether we want to continue seeing each other."

Maya, 24, shared a similar experience.

"Some of my most enjoyable dates were the ones where neither person focused on defining the relationship immediately. Getting to know someone first has worked better for me."

About XFun

XFun is a social discovery platform that enables adults to connect with others through customizable relationship preferences and communication tools. The platform offers users options to define and update their preferences as their interactions develop.
