

# Waterway Plumbing Shares Guidance on Preparing Plumbing Systems for Hurricane Season in Cape Coral, Florida

CAPE CORAL, FL, UNITED STATES, June 29, 2026 /EINPresswire.com/ -- As

hurricane season continues across Southwest Florida, [Waterway Plumbing](#) is encouraging homeowners to include plumbing systems in their seasonal preparation plans. While many residents focus on securing roofs, windows, and outdoor items, plumbing systems can also be affected by heavy rainfall, flooding, power outages, and changing weather conditions.

Preparing plumbing before hurricane season helps homeowners address small concerns early. Taking preventive steps today may help reduce unexpected plumbing issues after severe weather."

*Chris Ford, owner of Waterway Plumbing*

Preparing plumbing systems before severe weather arrives may help reduce unexpected disruptions and allow homeowners to identify maintenance needs before storms become more frequent.

How do I get my plumbing ready for hurricane season in Cape Coral, Florida?

Many homeowners ask, "How do I get my plumbing ready for hurricane season in Cape Coral, Florida?" A good

starting point is scheduling routine [plumbing maintenance](#) before severe weather develops. A professional inspection can identify hidden leaks, evaluate shut-off valves, inspect the water heater, and check drains and plumbing fixtures for signs of wear. Knowing the location of the home's main water shut-off valve is also recommended so the water supply can be turned off if damage occurs during a storm.

## Common Plumbing Concerns During Hurricane Season

Heavy rain and flooding can place additional demands on residential plumbing systems. Existing leaks may become more noticeable, while slow drains can contribute to standing water around the home. Plumbing fixtures that have not been inspected for several years may also experience added strain during periods of severe weather.

Addressing these concerns before hurricane activity increases gives homeowners time to

complete recommended maintenance and reduce the likelihood of unexpected plumbing problems during or after a storm.

### Routine Maintenance Can Support Storm Preparation

Routine plumbing maintenance remains one of the most practical ways to prepare for hurricane season. Services such as drain cleaning, emergency leak detection, toilet replacement, and water heater maintenance can help identify issues before they become larger repairs.

Many homeowners also choose to flush their water heaters as part of seasonal maintenance. Removing sediment buildup may improve performance and provide an opportunity to inspect the unit for signs of wear. Reviewing plumbing fixtures throughout the home can also help identify components that may benefit from replacement before severe weather arrives.

### Seasonal Preparation for Cape Coral, Florida Homes

Cape Coral, Florida, experiences hurricane activity each year, making seasonal home preparation an important part of property maintenance. In addition to assembling emergency supplies and protecting outdoor areas, homeowners are encouraged to review the condition of their plumbing systems before storms become more frequent.

Waterway Plumbing continues to provide plumbing services for homeowners throughout Cape Coral, Florida, including water heater installation, drain cleaning, toilet replacement, emergency leak detection, and routine maintenance. These services support homeowners who want to prepare their plumbing systems before hurricane season and address concerns that may arise afterward.

Planning ahead can also make scheduling maintenance more convenient before service requests increase during active storm periods. Taking time to inspect plumbing systems before severe weather arrives may help homeowners better understand their home's plumbing and identify areas that could benefit from attention.

Homeowners who would like more information about preparing their plumbing systems for

hurricane season or scheduling maintenance are encouraged to [contact](#) Waterway Plumbing or call (239) 471-5068.
