

Krytheon Expands Enterprise Platform Through Strategic Combination with Aptimeta

Combination adds proven automation technology, engineering scale, and enterprise implementation capabilities to Krytheon's governed enterprise platform.

NEW YORK , NY, UNITED STATES, June 26, 2026 /EINPresswire.com/ --

[Krytheon Inc.](#), the governance-first enterprise infrastructure company developing software for treasury coordination, cross-border financial workflows, and institutional execution environments, today announced a strategic combination with SMI TechSolutions Pvt. Ltd., operating as

[Aptimeta](#), an enterprise automation and product engineering company with more than 150 technology and domain professionals and a track record of more than 180 completed enterprise projects. The combination significantly expands Krytheon's engineering organization, intelligent document processing, workflow automation, and enterprise delivery capabilities, further advancing the Company's enterprise platform for treasury coordination, cross-border financial workflows, and institutional execution.

Large enterprises often manage treasury operations, cross-border payments, compliance, and financial approvals across numerous banks, payment providers, ERP systems, and internal workflows. While those systems perform individual functions, they rarely provide unified governance, operational visibility, or a complete evidentiary record across the entire process. Krytheon is building the software layer that coordinates those systems into a unified enterprise operating environment—enabling organizations to coordinate complex workflows, apply governance policies, preserve evidence, and maintain an auditable record of enterprise activity while regulated financial institutions continue to perform the underlying financial activities where applicable.

Aptimeta materially accelerates that vision. Its mature automation platform spans intelligent document processing, workflow automation, hyperautomation, AI capabilities, product

engineering, and global delivery. The combination materially expands Krytheon's implementation capacity, enabling the Company to deploy its enterprise platform across larger organizations and increasingly complex regulated operating environments. Rather than developing those capabilities organically over time, Krytheon gains an experienced engineering organization, proven automation technologies, and implementation capacity that can be integrated directly into the Company's enterprise platform.

By integrating Aptimeta's automation platform, engineering organization, intellectual property, and implementation capability into a unified platform, Krytheon strengthens its ability to deliver governed financial and operational workflows as integrated enterprise solutions rather than disconnected point solutions. The Company believes this combination of platform integration and engineering depth positions it to address growing enterprise demand for governed, auditable automation.

"Our strategy has consistently been to build an enterprise platform that brings governance, automation, intelligence, and execution together within a single operating environment," said Aylin Oriol, Chief Executive Officer and Chief Innovation Officer of Krytheon. "Aptimeta expands the engineering depth, automation capabilities, and implementation capacity required to deliver that platform at enterprise scale. Just as importantly, it brings proven talent, mature technologies, and customer experience that strengthen our ability to support increasingly complex enterprise and regulated operating environments."

Existing Aptimeta customer relationships, contracts, support arrangements, engineering teams, and delivery commitments are expected to continue without interruption. The combination is intended to increase investment, engineering capacity, and long-term platform capability. Aptimeta customers are not expected to experience forced migration or disruption to existing support and delivery as a result of the transaction.

The Company believes the combination represents another important step in its long-term strategy of building a unified enterprise platform capable of supporting increasingly complex treasury, cross-border, and regulated workflows, and expects the additional engineering scale, implementation capacity, and enterprise footprint to accelerate that strategy.

About Krytheon Inc.

Krytheon Inc. builds the software layer that sits above the banks, payment providers, and enterprise systems that large organizations already use—coordinating, governing, and evidencing financial and operational activity across them, with an initial focus on treasury coordination and cross-border financial workflows. Krytheon does not move money or take custody of funds; regulated financial institutions and licensed providers perform those functions, while Krytheon provides the coordination, governance, oversight, and audit trail around them.

About Aptimeta

Aptimeta, operated by SMI TechSolutions Pvt. Ltd., is an enterprise automation and product

engineering company with capabilities spanning intelligent document processing, workflow automation, robotic process automation, AI capabilities, and product engineering.
