There is a considerable increase in awareness of mosquito borne disease, which boosts the demand for spray mosquito repellents. In addition, rise in global temperature provides favorable conditions for the breeding of mosquito, thus, leads to increase in penetration of mosquito repellents in the global market. Moreover, the development of natural herb-based mosquito repellents has reduced various side effects of the repellents on human health such as skin rashes, breathing problems, and other health hazards. Consumers in the developed regions have started using neem-based sprays, creams, & oils, citronella oil, birch tree bark, and other plant-based ingredients. The change in the consumer preferences toward herb-based mosquito repellents is expected to boost the Spray Mosquito Repellent Market Growth.

According to the Spray Mosquito Repellent Market Analysis, the market is segmented into raw material, distribution channel, and region. On the basis of raw material, the bio-based repellent segment held the major share in the market in 2021 and is likely to remain same throughout the Spray Mosquito Repellent Market Forecast period. Bio-based mosquito repellents are considered economically safe and do not affect environment in a negative way.
