

Natural Embrace™ Introduces Made in USA High-Tech Skincare for Sensitive Skin

LOS ANGELES, CA, UNITED STATES, June 30, 2026 /EINPresswire.com/ -- Natural Embrace™, a USA-based skincare company focused on advanced skin science and natural ingredients, is pleased to announce the introduction of its Made in USA skincare and personal care line developed for sensitive skin and designed to support a wide range of skin types. The collection brings together modern cosmetic technologies, including exosome and nanoliposome delivery systems, with carefully selected natural and organic ingredients.

The announcement highlights Natural Embrace™'s growing product portfolio, including [Tremella Exoshield+](#) Serum, [Cica Exoradiance](#) Serum, and the [Natural Embrace™ Deodorant](#) collection. Each product reflects the company's central purpose: to combine science-led formulation with gentle, skin-conscious care.

Founded in 2025, Natural Embrace™ was created with a focus on people who often struggle to find products that feel both effective and suitable for sensitive skin. For many consumers, skincare is not simply part of a routine. It is connected to confidence, comfort, and the ability to move through daily life without worrying about irritation, heaviness, or products that feel poorly matched to their needs. Natural Embrace™ was developed with that experience in mind.

The company's Tremella Exoshield+ Serum combines exosome technology with Tremella Fuciformis Sporocarp, also known as snow mushroom, an ingredient valued in skincare for its hydrating properties. Designed as more than a traditional serum, Tremella Exoshield+ is positioned as a hydration support product, glow booster, and makeup primer for those seeking a fresh, dewy, and plump-looking appearance. Clinical proof shows that Tremella Exoshield+

demonstrated support for hydration and skin barrier performance, including reduced transepidermal water loss in healthy skin testers.

Natural Embrace™'s Cica Exoradiance Serum was developed for consumers experiencing visible signs of skin stress caused by busy routines, environmental exposure, and daily external factors. By pairing Cica with exosome technology, the serum is designed to support a refreshed, balanced, and naturally radiant-looking complexion while remaining aligned with the company's gentle skincare approach.

Additionally, the Natural Embrace™ Deodorant collection introduces nanoliposome technology to personal care. Nanoliposomes are microscopic lipid-based structures designed to help encapsulate and protect active ingredients, supporting a more thoughtful delivery approach. In deodorant care, the goal is to help maintain freshness while respecting the skin's natural balance, creating a cleaner and more advanced experience for everyday use. The Natural Embrace™ Deodorant collection is aluminum-free and formulated to support lasting freshness without leaving stains or white residue on shirts.

"Natural Embrace™ was created to bring together the best of nature and modern skincare science in a way that feels safe, thoughtful, and effective for sensitive skin," says Nga Nguyen, Chief Executive Officer of Natural Embrace™. "Our guiding idea is simple: Nature's Best, just for you. Every formula reflects our commitment to research, quality, and skin support."

Natural Embrace™ differentiates itself through its focus on high-tech skincare development, including phyto-exosome, phyto-nanoliposome, and phyto-stem cell technologies. The company also emphasizes research and development, dermatologist-tested and approved products,

MASTER ANTIOXIDANT GLOW

Glutathione for Clear, Luminous Skin
