Forecasted Expansion and Market Size of the Collaboration Display Market

The collaboration display market has expanded rapidly in recent years. It is projected to grow from \$1.83 billion in 2025 to \$2.01 billion in 2026, representing a compound annual growth rate (CAGR) of 10.2%. This impressive growth during the historic period has been driven by greater adoption of corporate video conferencing, growth

in digital classrooms and e-learning platforms, early use of interactive whiteboards in education, increasing enterprise digitization projects, and a surge in remote collaboration tools triggered by global disruptions.

Looking ahead, the market is expected to continue its upward trajectory, reaching \$2.99 billion by 2030 with a CAGR of 10.4%. This forecasted expansion is supported by the proliferation of hybrid work models across sectors, growing demand for AI-powered meeting productivity solutions, deeper integration of immersive collaboration technologies, increased investments in smart office infrastructure, and heightened cybersecurity needs for enterprise collaboration systems. Emerging trends likely to shape the market include AI-driven real-time collaboration and content summarization, cloud-enabled multi-device screen sharing platforms, development

Understanding What Collaboration Displays Are and Their Role

Collaboration displays are interactive digital screens designed to facilitate multiple users working together by sharing content and communicating in real-time, either face-to-face or remotely. These devices aim to boost teamwork and productivity through a centralized interface used for presentations, brainstorming sessions, video conferencing, and collaborative decision-making processes.

How Hybrid and Remote Work Models Propel Collaboration Display Demand

The increasing prevalence of hybrid and remote work arrangements stands out as a major catalyst for growth in the collaboration display market. Hybrid and remote work refer to flexible setups where employees split their time between office locations and remote environments, creating a strong need for reliable communication and collaboration technologies. Advances in digital communication tools and a growing focus on employee productivity and work-life balance continue to drive this shift. Collaboration displays support these models by enabling seamless real-time content sharing, interactive meetings, multi-user participation, and smooth integration with video conferencing platforms, thereby improving collaboration efficiency across dispersed teams. For example, in July 2024, the US Bureau of Labor Statistics reported that 35% of employed individuals worked at least some hours from home in 2023, up slightly from 34% in 2022. This rise underscores the growing demand for technologies like collaboration displays in support of changing work habits.
