

Vannin Group Expands Access to Deployable Field Hospitals and Mobile Clinics for Healthcare Providers

The healthcare infrastructure company is supporting faster clinical capacity through mobile healthcare units, and operational healthcare technology.

NEW YORK, NY, UNITED STATES, July 6, 2026 /EINPresswire.com/ -- [Vannin Group](#), a healthcare infrastructure and technology company, today announced its continued focus on deployable [field hospitals](#), [mobile clinics](#), and modular healthcare environments designed to help healthcare providers expand clinical capacity quickly and reliably.

NATO Standard Field Hospitals On Stock

Vannin Group works across healthcare infrastructure, operational delivery, and healthcare software. The company supports projects where healthcare systems need flexible clinical space, faster deployment options, and practical tools that can be used in real-world care environments.

“

Healthcare systems need practical ways to add capacity faster. Our focus is deployable clinical infrastructure that helps providers bring care closer to patients.”

Vannin Group spokesperson

Vannin Group’s modular healthcare assets include field hospitals, mobile clinics, diagnostic units, and adaptable clinical environments that can support a wide range of healthcare needs. These units are suited for organizations responding to capacity pressure, remote access challenges, temporary service requirements, refurbishment projects, emergency planning, and the need to bring healthcare services closer to patients.

Existing inventory is held in the UK and Europe and can be configured for different clinical and operational use cases. Vannin Group works with healthcare organizations, public-sector partners, private providers, and project teams to identify suitable infrastructure options and

support planning around deployment, configuration, and operational readiness.

“Healthcare systems are under pressure to move faster, serve more patients, and build capacity without waiting years for traditional infrastructure,” said a Vannin Group spokesperson. “Our focus is on practical healthcare delivery. Field hospitals, mobile clinics, and modular clinical environments can give providers a faster route to usable capacity while maintaining a strong focus on patient care, safety, and operational performance.”

Alongside its healthcare infrastructure work, Vannin Group owns Greencube, a healthcare technology platform developed within the family’s businesses. Greencube has supported 300+ clinical sites across 14 countries, with 15m+ patient records, and has been in production since June 2012. The platform reflects Vannin Group’s broader belief that healthcare delivery depends on both physical infrastructure and reliable digital systems.

The company sees growing demand for flexible healthcare models as providers look for ways to respond to changing populations, workforce constraints, and pressure on permanent facilities. Mobile and modular healthcare environments can be used to extend services, maintain continuity during construction or refurbishment, support outreach programs, and provide additional capacity during periods of demand.

Vannin Group’s work is guided by a simple principle: healthcare infrastructure should help care reach patients faster. By combining deployable facilities, healthcare technology, and operational execution, the company is building a practical platform for a new generation of healthcare delivery.

Vannin Group is based in New York and operates with international healthcare experience across infrastructure, technology, and clinical operations.
