

New Ideas and Innovations LLC Seeks Partners for Breakthrough Technologies

Edward H. Heath seeks buyers, licensing partners, and investors to commercialize a growing portfolio of practical inventions.

MADISON, CT, UNITED STATES, July 7, 2026 /EINPresswire.com/ -- New Ideas and Innovations LLC, an independent research, development, and technology company founded by inventor and engineer Edward H. Heath, today announced that it is actively seeking buyers, licensing partners, and qualified investors for a portfolio of technologies designed to address transportation efficiency, water conservation, practical consumer needs, and other quantum leap innovations.

The company is currently focused on identifying strategic relationships with established companies, manufacturers, technology groups, and qualified investors interested in evaluating opportunities to acquire technologies outright, enter licensing agreements, invest in the company and its workshop capabilities, or fund the development of selected products and innovations.

Two of the company's most developed projects are the electric vehicle concepts known as "The Watt" and

"The EEV-3," along with the "1 * 2 Flush Genuine Toilet Water Saver." But Heath says those projects are only part of a much larger pipeline of ideas he wants to build, test, and develop. The biggest obstacles are straightforward: he needs a proper workshop, equipment, and the capital to turn more of those ideas into working products.

New Ideas and Innovations LLC operates primarily as a research, development, and technology company rather than a large-scale manufacturing organization. Its business model is centered on developing technologies and product improvements that may be advanced through licensing arrangements, technology acquisition, strategic partnerships, outside investment, or relationships with companies that possess the manufacturing and distribution capabilities necessary to bring products to a broader market.

"Our focus is on developing ideas that solve real problems and create practical value," said Edward H. Heath, Founder and CEO of New Ideas and Innovations LLC. "I have spent years designing, building, testing, and improving technologies because I believe innovation should ultimately help people save resources, save money, or improve the way existing products and systems work."

A Company Built Around Practical Innovation

New Ideas and Innovations LLC was established around a straightforward mission: develop new technologies from the ground up and identify opportunities to improve products and systems that already exist.

Heath's approach to invention is highly hands-on. His work spans mechanical systems, electrical systems, machining, fabrication, prototyping, troubleshooting, and product development. Rather than approaching innovation exclusively from a theoretical perspective, Heath's development process is rooted in physically building and refining his concepts.

His path into technology development has also been unconventional. Heath did not follow a traditional academic route into mechanical engineering, electrical work, machining, or fabrication. Instead, he developed his abilities independently through practical experience, experimentation, research, testing, and years of direct work.

That background has influenced the culture of New Ideas and Innovations LLC. The company's development process emphasizes resourcefulness, repeated testing, and a willingness to continue working through difficult technical and financial constraints.

Heath's work has previously received recognition for product innovation. His toilet handle assembly design received Top 25 recognition from a competition involving more than 4,300 entries, and his broader innovation work also received recognition from a Connecticut technology pipeline organization.

For Heath, those acknowledgments reinforced a belief that independently developed technologies can compete for attention when they address practical problems in meaningful ways.

Advancing Ultra-Long-Range Electric Vehicle Development

One of Heath's major areas of work has been the development of ultra-long-range electric vehicle technology.

The development process required Heath to work through significant practical limitations. Much of the vehicle work was carried out in a small garage without a vehicle lift and with limited heating during cold New England winters. Financial constraints added another layer of difficulty to the development process.

Heath also continued his work while managing lasting physical limitations and pain resulting from a serious automobile accident years earlier.

Despite those challenges, the project continued moving forward.

The experience became representative of the company's broader development philosophy: work with the available resources, continue solving problems individually, and remain committed to completing and improving promising technologies.

New Ideas and Innovations LLC is now seeking opportunities to introduce its electric vehicle concepts and related technology to organizations with the capital, infrastructure, technical resources, and market access necessary to evaluate potential paths toward further development and commercialization.

The company believes that relationships between independent innovators and established industry participants can create opportunities for technologies that might otherwise remain limited by the significant capital requirements associated with manufacturing, testing, certification, distribution, and market entry.

"We understand that developing a technology and bringing it to mass market are two very different stages," Heath said. "Our goal is to connect with the right people and organizations that can seriously evaluate what we have developed and determine whether there is an opportunity to move forward together."

Water Conservation Remains a Core Development Area

In addition to transportation technology, New Ideas and Innovations LLC is continuing its work involving water conservation.

The “1 * 2 Flush Genuine Toilet Water Saver” reflects the company’s interest in improving everyday systems that consume natural resources at scale.

Water conservation remains an important consideration for households, commercial properties, municipalities, and regions facing infrastructure and resource-management challenges. New Ideas and Innovations LLC sees product-level efficiency improvements as one part of a broader effort to reduce unnecessary resource consumption.

The company’s approach is based on the idea that innovation does not always require creating an entirely new category of product. In many cases, meaningful improvements can come from examining widely used systems and identifying ways to make them operate more efficiently.

That philosophy continues to guide the company’s research and development efforts across multiple areas.

Seeking Buyers, Licensing Partners, and Investment Capital

As New Ideas and Innovations LLC moves forward, its immediate priority is connecting with serious parties capable of helping evaluate and advance its technologies.

Depending on the technology and the structure of a potential transaction, the company is open to exploring several possible paths, including licensing discussions, technology acquisition, strategic investment, development partnerships, and relationships with manufacturers or commercialization groups.

The company wants to hear from investors, manufacturers, and established businesses that understand how to evaluate early-stage technology and have the resources to help move strong ideas forward.

For Heath, the right relationship is not only about funding. He is looking for people and organizations that can bring resources, experience, manufacturing capability, and a real path toward getting promising products into the market.

The company does not position itself as a mass manufacturer. Instead, it seeks to serve as an innovation and technology-development organization capable of creating concepts, developing prototypes, improving designs, and working with appropriately positioned partners on potential next steps.

This approach allows New Ideas and Innovations LLC to concentrate on what it considers its core strength: invention and development.

Looking Toward the Next Stage of Growth

Over the next two to five years, Heath hopes to see the company's technologies evaluated and potentially advanced through relationships with established organizations.

His longer-term vision is bigger than any one vehicle or water-saving product. Heath has a pipeline of additional ideas he believes can become useful products, but developing them requires space, tools, materials, and funding. A dedicated workshop would give him the ability to build, test, improve, and demonstrate those concepts instead of leaving promising ideas on the drawing board.

For Heath, the goal is simple: create a place where he can keep inventing. With the right investment and a properly equipped shop, he believes he can develop far more than the projects people have already seen.

"The electric car and the toilet water saver are not the only things I have," Heath said. "I have many other ideas in the pipeline that I want to build and develop. What I don't have right now is the shop and the capital to do it. That's why finding the right investors and partners matters so much. I want the chance to keep building things that solve real problems and have practical value."

For New Ideas and Innovations LLC, the next phase is centered on visibility, serious evaluation, and identifying organizations that understand the challenges involved in moving technology from an independent development environment toward commercial application.

Heath believes that persistence has been one of the most important elements of his work to date. From developing vehicle technology in physically difficult conditions to continuing projects despite limited capital and personal physical challenges, he has remained committed to advancing his ideas.

That same persistence is now driving the company's outreach efforts.

New Ideas and Innovations LLC invites interested companies, manufacturers, technology groups, and qualified parties to learn more about the company and its developing portfolio of technologies.

About New Ideas and Innovations LLC

New Ideas and Innovations LLC is a research, development, and technology company founded by Edward H. Heath. The company focuses on developing original technologies and creating improvements to existing products and systems. Its areas of development include electric vehicle technology, water conservation solutions, mechanical systems, electrical systems, machining, fabrication, and practical product innovation.

The company seeks relationships with manufacturers, strategic partners, technology buyers, and

qualified investors capable of evaluating and potentially supporting the development and commercialization of selected technologies.

Company information is available through the official New Ideas and Innovations LLC website.
